---

### **LIST OF SAR EVENTS ASSISTED BY COSPAS-SARSAT**

---

**January - December 2012**

---

Note: Distress incident reports when data was not used in SAR operation were not included in the count of SAR events assisted by Cospas-Sarsat and persons rescued, because although Cospas-Sarsat provided alert and/or location data, for various reasons this information was not of direct use to SAR services.

**TABLE C.1: Number of SAR Events and Persons Rescued****January 2012 to December 2012**

Type of Event	Number of Events				Person Rescued Total
	Total	Only Alert	First Alert	Support	
<b>Aviation</b>	141	28	49	64	267
	303	42	129	132	1,470
	190	41	105	44	292
<b>Total</b>	634	111	283	240	2,029

**TABLE C.2: Summary of SAR Events and Persons Rescued****September 1982 to December 2012**

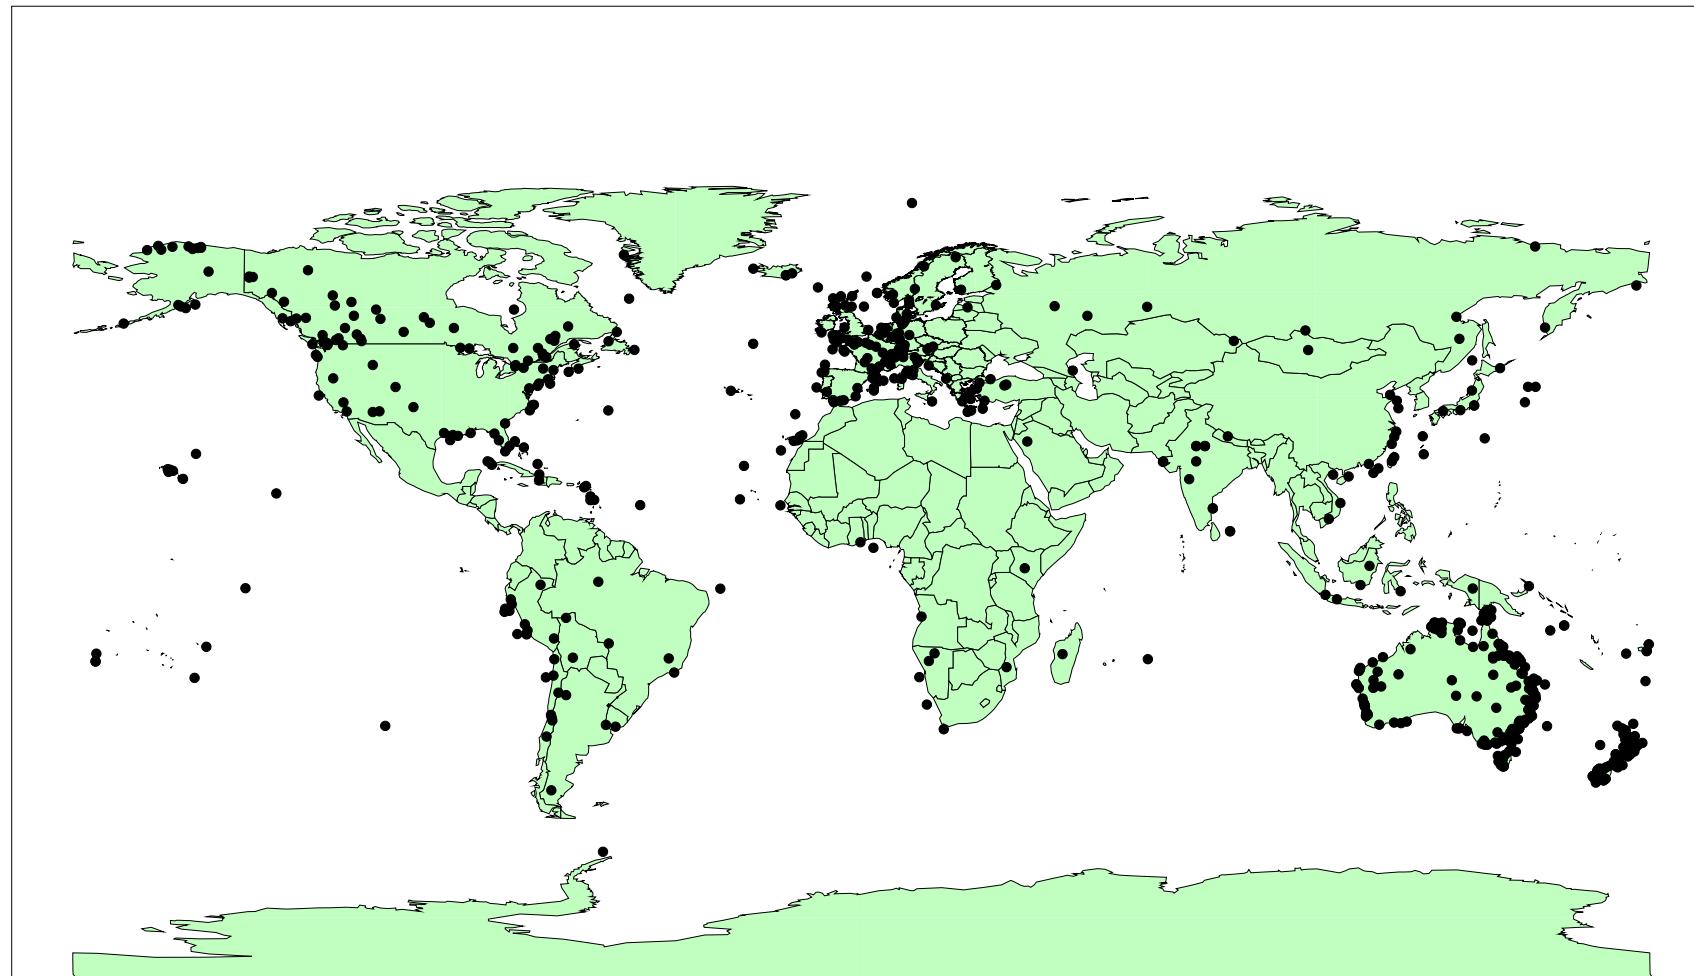

Beacon Type	Type of Event	Number of Events				Person Rescued Total
		Total	Only Alert	First Alert	Support	
<b>121.5 MHz *</b>	<b>Aviation</b>	1,489	330	460	699	3,020
	<b>Maritime</b>	1,708	415	601	692	5,151
	<b>Land</b>	446	112	230	104	811

**Details of Incident:**Great Barrier Reef, Australia

The RCC was requested by Whitsunday Water Police to assist with an air search for a missing doryman from a fishing vessel in the Hydrographers Passage area of the Great Barrier Reef. The RCC tasked the Cairns Dornier to undertake an initial search and to deploy a SLDB. Shortly after dropping the SLDB, the missing doryman activated his distress beacon, which was subsequently homed by the Dornier. The doryman was located on the sand cay on Creal Reef. The police tasked rescue helicopter R422 and Mackay Volunteer Marine Rescue vessel to attend Creal Reef at daylight. R422 recovered the doryman and transferred him to Mackay and the FV Dragon recovered the dory and deactivated the distress beacon.

**Details of Incident:**

70 km South off Oodnadatta Track, South Australia

A beacon was detected on the Oodnadatta track. The beacon was registered to Kea Campers who advised that they hired a 4WD vehicle. A police and ambulance ground response was dispatched from Oodnadatta along with a C172 VH-MXM from William Creek. The ambulance arrived on scene and located the 4WD which had rolled. The two persons were taken back to Oodnadatta one suffering from minor injuries.

**Details of Incident:**

Nhulunbuy, Northern Territory, Australia

A 406MHz EPIRB was detected by satellite in Melville Bay north west of Gove Peninsula. Enquiries revealed the beacon was owned by a man from Nhulunbuy who had left in the early hours of the morning for a fishing trip with two friends. The Nhulunbuy Police were informed and Darwin based rescue aircraft Rescue-481 was tasked to the scene. Two vessels belonging to Arafura Pearls were tasked from the pearl farm located near the distress scene and medical personnel left Nhulunbuy in the company of local police. All three people were located and rescued safely. The distressed vessel was found to be out of fuel.

<b>Date of Incident:</b>	03-Jan-12	<b>Persons Involved:</b>	2

**Details of Incident:**4 nm East off Sydney Heads, Australia

An unregistered EPIRB was detected and the Sydney Water Police vessels and the helicopter Rescue 21 were tasked. The RCC staff noted helicopter Life Saver-1 on system tracking in the vicinity and passed on information relating to the active EPIRB location. The helicopter located the distress vessel and dropped a life raft. Four people were subsequently recovered by the tasked police vessel. The EPIRB were located and switched off.

<b>Date of Incident:</b>	04-Jan-12	<b>Persons Involved:</b>	3

<b>Cospas-Sarsat provided <u>supporting data</u></b>		<b>Beacon Registration Data Available</b> Yes	
<b>Details of Incident:</b>			

21 nm SW off Honolulu, Hawaii, USA

The Cospas-Sarsat System detected a registered 406 MHz EPIRB. The F/V Michelle S, with three passengers on board, became disabled while fishing. A 911 call was placed via cell phone by one of the crew members. The EPIRB was manually activated approximately 17 minutes after the 911 call. CGD14 received the alert and correlated it to the 911 call. The crew of the vessel was able to relay their position via cell phone due to their proximity to the HH FAD (Honolulu Harbor Fish Aggregating Devise) buoy. CGD14 dispatched a vessel which located the vessel in distress and towed it safely back to Honolulu.

**Details of Incident:**

Kaipara Harbour, New Zealand

A Cospas-Sarsat unlocated distress alert was received at the same time as the police were informed by a relative that there was a yacht in trouble off the Kaipara Harbour. Once a satellite position established that the beacon was in the same area as the police report, RCCNZ took coordination of the incident. The engine of the yacht was broken and sails were damaged. A commercial charter vessel was organised to tow the yacht.

<b>Cospas-Sarsat provided <u>first alert</u></b>		<b>Beacon Registration Data Available</b> Yes	

**Details of Incident:**101 nm NE off Guantanamo Bay, Cuba

The Cospas-Sarsat System detected a 406 MHz EPIRB at Guantanamo Bay, Cuba. The EPIRB on the S/V Gypsy Moon was manually activated after the vessel was demasted with one person aboard. CGD05 received the unlocated Cospas-Sarsat alert and began investigating with the beacon registration information. Another vessel, the CG Cutter Mohawk, received a radio distress call from the distressed vessel and used the position to locate the Gypsy Moon and transported the distressed individual to Guantanamo Bay with no injuries.

**Details of Incident:**12 miles South off Shinnecock, NY, USA

The Cospas-Sarsat System detected a 406 MHz EPIRB distress signal at 12 miles South of Shinnecock, NY. The crew of the fishing vessel Vincenzo abandoned their vessel after it began taking on water. The three crew members put on their survival suits, radioed for help and entered the vessel's life raft. The crew also activated the vessel's EPIRB in case responders were unable to locate them. The Coast Guard launched a rescue boat from Station Shinnecock and issued a radio broadcast asking mariners in the area to render assistance. The fishing vessel Rhonda & Denise responded to the broadcast, rescued all three fishermen, and later transferred them to a Coast Guard rescue boat. The EPIRB was lost at sea and did not contribute to the resolution of the case. No injuries were reported.

**Details of Incident:**7 nm West off Oahu, HI, USA

The Cospas-Sarsat System detected a 406 MHz EPIRB distress signal. The EPIRB on the F/V Guppy was manually activated when the vessel became disabled with two people onboard. On a training mission in the area, a Coast Guard HH65 helicopter flew toward the distressed vessel after detecting a 121.5 MHz signal. The helicopter located the Guppy after a flare was fired from the vessel. The helicopter lowered a radio to the Guppy and verified that all aboard were safe. The helicopter notified a Good Samaritan vessel about the distress and this vessel towed the Guppy to port.

**Details of Incident:**North Spirit Lake, Ontario, Canada

An ELT was detected by GOES East and West was registered to a piper aircraft owned by Keystone Air Service ltd. JRCC Trenton confirmed the aircraft was enroute to the small community of North Spirit Lake in northwestern Ontario, but had not arrived. An elemental position formed 10 minutes later near the community of North Spirit Lake, and it was confirmed that the aircraft had impacted terrain and that there was a post-accident fire. Initial reports suggest that four of the five occupants perished. RCC acknowledges that the Cospas-Sarsat was the only alerting agency.

**Details of Incident:**

20 nm West off Mandurah, Western Australia

The RCC received hearing reports and subsequent satellite detections of a distress beacon West of Mandurah. The enquiries revealed that the beacon was on board a runabout with one male person on board on a fishing trip. The RCC tasked helicopters Rescue 65 and Polair 61 to locate the vessel. A police vessel and volunteer marine rescue vessel were also tasked. The helicopter located the runabout broken down and it was then taken in tow by the police vessel. The volunteer vessel met with the police vessel and took the broken down boat back to Mandurah.

<b>Cospas-Sarsat provided <u>first alert</u></b>		<b>Beacon Registration Data Available</b> Yes	

**Details of Incident:**12 nm SE off Toms River, NJ, USA

The EPIRB on the fishing vessel Mandy Ness was automatically activated when the vessel capsized with two people aboard. The Coast Guard District 5 Rescue Coordination Center (CGD05) received the Cospas-Sarsat unlocated alert and contacted the wife of the registered 406 MHz beacon owner, who verified that the Mandy Ness was under way with a fleet of fishing vessels. The wife contacted one of the vessels in the fleet which could not contact the Mandy Ness by radio. The last boat in the fleet, the Francis Ann, turned around to search for the Mandy Ness and ran into its debris field. The Francis Ann located the capsized hull of the Mandy Ann and rescued one fisherman from the water. The survivor told that another individual was trapped in the vessel. CGD05 dispatched a helicopter from Station Atlantic City which deployed rescue divers. The trapped fisherman was freed from the wreckage but died while being transported to shore.

**Details of Incident:**Rottnest Island, Australia

The Perth based rescue helicopter (RSCU65) reported hearing a distress beacon at Rottnest Island while providing medical assistance for a diving accident. The helicopter informed that the initial patient died and they were available to assist in another SAR task. Shortly after a registered beacon was detected by satellite that correlated with the initial report. On launching the helicopter reported that the beacon was no longer active. Shortly after the Fremantle Water Police informed the RCC that it was confirmed that the EPIRB did belong to the deceased diver and had been switched on by the son at the time of the initial incident.

**Details of Incident:**Palm Island, Australia

An unlocated alert was received from an unregistered 406Mhz Distress Beacon and later an initial beacon detection and hearing reports were received with a position in the vicinity of the Palm Island group area north of Townsville. The Rescue-521 Townsville based helicopter and Pilot Vessel Bindy were diverted to investigate the distress location near Brisk Island southwest of Palm Island. The helicopter located a dinghy at anchor with two people on board. PV Bindy diverted to the location and subsequently confirmed that the vessel ran out of fuel. The dinghy was towed back to Palm Island and the helicopter was released from tasking.

**Details of Incident:**60 nm South off Cape York, Australia

A DSC distress alert and subsequent 406 MHz distress beacon detection were received by RCC Australia from the sailing vessel, which was taking on water at the time whilst transiting through the Great Barrier Reef. The vessel's main engine failed and a hand pump was unable to keep up with the ingress of water. The merchant vessel in close proximity to the incident location responded to a mayday distress call. It confirmed they were launching a lifeboat to recover two people from the yacht. Later it was confirmed that two people and a dog were rescued and were transported to Weipa. The yacht was abandoned adrift with anchor deployed. Sea Safety Message was issued.

**Details of Incident:**

5 nm South of Chilliwack, British Columbia, Canada

An encoded ELT was registered to a RCMP helicopter. The RCC Victoria found through their investigation that the helicopter was on a training exercise and that the RCMP was aware that the helicopter was down and that an emergency response team was on scene. The one passenger on board was taken to hospital where he was pronounced deceased.

**Details of Incident:**Pittwater, Australia

An unlocated 406Mhz distress beacon was detected simultaneously to hearing reports which were received in the greater Sydney area. The initial checks with the registered owner revealed that the vessel was sold and used as a dive charter vessel out of Pittwater. The Rescue 21 helicopter and a police vessel were tasked by the RCC to proceed to the area to attend to the beacon. An aircraft of opportunity, Air Patrol One, overflow the hull of an overturned vessel with people sighted clinging to the vessel in close proximity to Box Head Broken Bay. The Rescue 24 and Life 1 helicopters were also tasked. The police vessel and rescue helicopters arrived on scene and recovered nine people safe and uninjured from the water onto the police vessel.

**Details of Incident:**56 nm North Hughenden, Queensland, Australia

The RCC received an initial detection of a personal locator beacon registered to Boomerang Campers. The emergency contacts informed that the beacon was hired with a Toyota Troopy Camper enroute from Brisbane to Alice Springs. The RCC tasked VH-VCB a Tier 4 King Air from Mount Isa for homing and helicopter Rescue 510 from Cairns for rescue. Overflying aircraft heard the beacon signal, which enabled the RCC to task the Queensland Police for a ground rescue. The RCC contacted a grazier from a station nearby who proceeded to the resolved position and located two uninjured tourists next to their wrecked Toyota 4WD camper. The further coordination of the incident was transferred to the Queensland Police and the two men were transported to Hughenden.

**Details of Incident:**

46 nm West of Deadhorse, Alaska, USA

The Cospas-Sarsat System detected a registered 406 MHz PLB in Alaska. A PLB was activated when an automobile with five people became repeatedly stuck in snow and was running low on fuel. AKRCC received the alert and forwarded the Cospas-Sarsat data to NSB. Before rescue was attempted the five individuals reported to NSB they had been picked up by an ice road trucker and safely transported to the trucker's next destination.

**Details of Incident:**

6 miles South off Springfield Robertson County Airport, Tennessee,

The Cospas-Sarsat System detected a 406 MHz ELT distress signal 6 miles South off Springfield Robertson County Airport, Tennessee, USA. The ELT of aircraft was activated when it crashed. Air Force Rescue Coordination Center (AFRCC) contacted the registered owner after they were alerted through the Cospas-Sarsat System. The registered owner told AFRCC he was fine but flipped the aircraft when he landed in a field and did not need any assistance. He also informed them that the police and fire service helped him flip the aircraft so he could deactivate the ELT. No injuries were reported.

**Details of Incident:**

27 miles South off Kodiak Island, Alaska, USA

The Cospas-Sarsat System detected a 406 MHz PLB distress signal at approximately 27 miles South off Kodiak Island, Alaska, USA. The Coast Guard District Seventeen (CGD17) received a Mayday call with a position from the fishing vessel Heritage stating that they were taking on water and sinking in Alitak Bay, Alaska. CGD17 diverted an MH60 on its way to a different rescue (56 miles Northwest of Kodiak Island) to the location. The MH60 reported there were two people in the water and five on a life raft. The MH60 was able to rescue the two people in the water. A Good Samaritan also arrived at the location after receiving the Mayday call and rescued the five people on the life raft. No injuries were reported.

**Details of Incident:**

70 miles NW off of Kodiak Island, Alaska, USA

The Cospas-Sarsat System detected a 406 MHz EPIRB distress signal at approximately 70 miles NW off Kodiak Island, Alaska. The Coast Guard District Seventeen (CGD17) received a call from the wife of the owner of a fishing vessel stating their fishing vessel Kimberly ran aground with four people on board. CGD17 launched an MH60 to the location and it attempted to hoist the distressed people twice with negative results due to the winds exceeding 90kts. A C130 was launched to the location to assist and keep a look out. CGD17 launched another C130 and MH60 to take over the rescue so that the engaged aircraft could return to refuel and change crew. The second MH60 attempted to hoist the distressed people twice but was also not successful. They were also replaced by another C130 and MH60. The third MH60 was able to hoist all four people. Two of the rescued individuals were fine but the other two had hypothermia and frost bite. All four people were taken to Kodiak then transported to the hospital by EMS for medical evaluations.

**Details of Incident:**20 nm NW off Fairbanks, AK, USA

The Cospas-Sarsat System detected a 406 MHz ELT distress signal at approximately 20 nm NW off Fairbanks, AK, USA. The ELT, on a single-engine aircraft was activated when the aircraft ski became caught in the snow on landing and the aircraft flipped over. The Alaska Rescue Coordination Center (AKRCC) received the Cospas-Sarsat alert and contacted the registered owner. The registered owner, a commercial flying company, informed AKRCC that N713C was on a routine flight in the area and that it would investigate. AKRCC then contacted the AK State Troopers for assistance but they were unable to help. AKRCC called the owner back and was told that the company owner took off in his own aircraft to investigate and discovered that the pilot was uninjured and had been rescued by Good Samaritan on a snow machine.

20 nm SW off Rottnest Island, Western Australia

The RCC Australia responded to a beacon activation and tasked an aircraft and the Helicopter Lifesaver 8, which flew to the scene. They discovered three persons in a recreational vessel, which experienced water intake and an electrical failure. All three persons were otherwise uninjured. The police assumed coordination of the incident and arranged for the local Volunteer Marine Rescue to tow the vessel to safety.

**Details of Incident:**

35 miles southeast off Guantanamo, Cuba

The Cospas-Sarsat System detected a 406 MHz EPIRB distress signal at approximately 35 miles SE off Guantanamo, Cuba. Coast Guard District Seven (CGD7) issued an Enhanced Group Call after they were alerted through the Cospas-Sarsat System. CGD7 launched a MH-65 helicopter, and diverted the Coast Guard boat Mohaek to the Cospas-Sarsat location. The MH-65 arrived and found the vessel Fuji Bay alongside a life raft. The Fuji Bay, a freighter, had brought the person from the liferaft onboard. The survivor confirmed he was the source of the EPIRB alert and was the only passenger on board. He did not need medical treatment. RCC France debriefed the survivor who revealed that his sailing vessel hit a rock early in the morning and he abandoned the vessel into his life raft. Prior to abandoning his vessel, he sent a VHF Digital Select Calling (DSC) alert to which the Fuji Bay responded. The Fuji Bay was en route to Cristobal, Panama with the survivor.

**Details of Incident:**

58 nm NE off Roma, Queensland, Australia

The RCC Australia received a detection of a GPS encoded personal locator beacon. The emergency contacts were invalid, so the RCC tasked helicopter Careflight 911 from Roma. Police advised they were looking for two people from the Queensland Department of Environment and expected the beacon detection was related. The helicopter located the two people and transported them to the police vehicle which was nearby.

**Details of Incident:**

1 mile South off Ray Community Airport, Macomb, MI, USA

The Cospas-Sarsat System detected a 406 MHz ELT distress signal approximately 1 mile South off Ray Community Airport, Macomb, MI. The pilot onboard a Glider crashed in a golf course South of Ray Community Airport. The Metro Park Police were notified and were the first to respond. The Air Force Rescue Coordination Center (AFRCC) received a call from the FAA indicating a glider had crashed in Macomb, MI. AFRCC contacted the local police department and Ray Community Airport. AFRCC later received the alert through Cospas-Sarsat and confirmed distress alert correlated with the crash. Pilot was the only person onboard the glider and was injured.

**Details of Incident:**

Less than a mile SW off Show Low Airport, AZ, USA

The Cospas-Sarsat System detected a 406 MHz distress signal at less than a mile SW off Show Low Airport, AZ, USA. The aircraft had just departed the airport when the pilot lost control of the aircraft and crashed. The airport contacted local authorities and reported the crash. Approximately one hour after the crash, Air Force Rescue Coordination Center (AFRCC) received the alert through the Cospas-Sarsat System. AFRCC contacted the nearby airport and confirmed the crash correlated with the alert. The Show Low Police Department was able to reach the crash site and found two deceased and two injured passengers inside the aircraft. The two survivors were rushed to the hospital for further treatment.

3 miles NW off Molokai Airport, Hawaii, USA

The Cospas-Sarsat System detected a 406 MHz PLB distress signal approximately 3 miles northwest off Molokai Airport, Hawaii. Coast Guard District Fourteen (CGD14) contacted the registered owner after they received the first unlocated alert through the Cospas-Sarsat System. The registered owner informed CGD14 the vessel, with three people on board, was disabled due to a broken shaft. CGD14 launched a 110ft patrol boat to the location of the distress. The three people were rescued and the vessel was towed to Hawaii Kai, a small boat harbor.

60 miles SE off New Orleans, LA, USA

The Cospas-Sarsat System detected a 406 MHz PLB signal at approximately 60 miles SE off New Orleans, Louisiana, USA just off the coast near South Pass. Two people onboard a sailing vessel sent out a Mayday through VHF when their vessel started taking on water after it was pushed onto the rocks near South Pass, LA, USA. Coast Guard District Eight (CGD08) launched a helicopter and a small boat to the location of the distress after receiving the Mayday. The Louisiana Wildlife Department arrived at the scene first and rescued the two people on board the vessel. They were later transferred to the Coast Guard small boat sent by CGD08. The PLB was activated 30 minutes after the Mayday was sent out. No injuries were reported.

**Details of Incident:**

Dane County Regional Airport, Madison, WI, USA

The Cospas-Sarsat System detected a 406 MHz ELT signal at Dane County Regional Airport, Madison, WI, USA. Three people onboard a company owned aircraft crashed on the airport field of Dane County Regional Airport. The aircraft was severely damaged and airport personnel contacted their emergency personnel to assist. All three people were able to exit the aircraft on their own before emergency personnel could arrive. The Air Force Rescue Coordination Center (AFRCC) then received the alert and contacted the airport. The AFRCC confirmed the alert correlated with the crash. All three people onboard the aircraft had minor injuries and were taken to a nearby hospital.

**Details of Incident:**

1 nm North Chilliwack, British Columbia, Canada

An unlocated ELT was registered to a Cessna 150 out of Pitt Meadows, British Columbia. Information passed to RCC Victoria, who determined that the aircraft flipped when attempting to land on a sandbar 1 nm North off Chilliwack, British Columbia. The one person on board was uninjured and recovered by another plane. The beacon ceased transmitting 10 minutes after the initial detection, most likely due to the pilot turning it off. RCC acknowledges that Sarsat was the first alerting agency.

**Details of Incident:**

30 miles East off Bellingham, WA, USA

The Cospas-Sarsat System detected a 406 MHz PLB distress signal at approximately 30 miles East off Bellingham, WA, USA in the North Cascades National Park. Both pilot and passenger onboard an aircraft crashed on the South side of Mount Baker in Baker-Snoqualmie National Forest (Part of the North Cascades National Park). Both were able to exit the aircraft and travel home with the help of a nearby friend. The Air Force Rescue Coordination Center (AFRCC) received the alert and requested the State Police to search the area. AFRCC was able to contact pilot's wife and were notified that the pilot and passenger were safe at home. AFRCC updated State Police where the pilot and passenger were located. The State Police arrived at the pilot's home and both pilot and passenger refused to give further information of the crash. According to State Police, both pilot and passenger seemed to be in good health.

**Details of Incident:**

Talleh Lagoons Tasmania, Australia

The RCC received a detection of a GPS encoded personal locator beacon near Talleh Lagoons. The beacon emergency contacts informed that there were two bushwalkers involved. The RCC tasked helicopter Polair 71 from Hobart. Prior to the departure, the helicopter crew reported that one of the bushwalkers called police and advised them that the beacon was activated. They awaited advice from the ambulance service. With agreement from the police, the RCC cancelled the task for the helicopter rescue to allow the ambulance service to task the aircraft.

**Details of Incident:**

Nhulunbuy, NT, Australia

The RCC Australia received a satellite detection of an EPIRB located just offshore from Nhulunbuy NT. The registered details identified the beacon as being used on a runabout. The local broadcasting was arranged and a merchant vessel responded by launching its rescue boats. A Coastwatch aircraft was diverted in flight and located an upturned vessel with four persons clinging to it. The aircraft identified a small craft nearby and made contact with it. The vessel responded and rescued two adults and two children. Other tasked aircraft and vessels were stood down. The beacon was recovered and switched off.

**Details of Incident:**55 nm West off Gonaives, Haiti, USA

The Cospas-Sarsat System detected a 406 MHz PLB about 55 nm West off Gonaives, Haiti. The sole passenger on the 42 foot Catamaran Ingeborg I activated the PLB. The Coast Guard District 7 Rescue Coordination Center received the Cospas-Sarsat alert and dispatched a Coast Guard Cutter and helicopter. The helicopter located the vessel. Radio calls made by the helicopter to the vessel wakened the passenger after he had fainted. The helicopter lowered a rescue swimmer to the vessel. The passenger was disoriented and requested to be taken off his vessel for medical care. The helicopter hoisted the distressed person on board and took him to the Cheshire Hall Medical Center in Providenciales. The PLB was left activated on the vessel for tracking.

**Details of Incident:**Lake Disappointment, Western Australia

The RCC received a detection of a GPS encoded beacon on the Canning Stock Route. The emergency contacts revealed that the beacon was in a Toyota Landcruiser 4WD with one man aboard. The Dornier Rescue 461 was tasked from Perth and helicopter VH-CFE was placed on standby at Port Hedland. The Dornier crew located a bogged 4WD at night with one man nearby and dropped containers with a radio and a satellite phone. The man made no attempt to retrieve any of the dropped items and after waving to the aircraft got back into his swag. It appeared the man was unharmed. VH-CFE was stood down and police tasked for recovery. The police reported they were unable to rescue the target. A police PC12 was then tasked to the original target location and was able to confirm no injuries by UHF radio. The following morning a helicopter was tasked from Port Hedland and recovered the occupant to safety.

**Details of Incident:**

Fayetteville Regional Airport, North Carolina, USA

The Cospas-Sarsat System detected a 406 MHz ELT distress signal at the Fayetteville Regional Airport, North Carolina, USA. An aircraft with two people on board, crashed and its ELT activated. Air Force Rescue Coordination Center (AFRCC) contacted the registered owner after they were alerted through the Cospas-Sarsat System. The AFRCC called the home base airport's Fixed Based Operator (FBO) after they were unable to reach the registered owner. AFRCC then called the tower because the FBO had no information about the crash. The tower confirmed the crash and informed the AFRCC that it was handling the case and did not need further assistance. The two people on board were transported to the hospital with minor injuries.

<b>Details of Incident:</b>			

Gulf of Carpentaria, Australia

A satellite detected a beacon in the Gulf of Carpentaria. The beacon was registered to a fishing boat. The checks established that the vessel was at sea on a fishing trip with a party of five people. A Royal Flying Doctor Service aircraft of opportunity was tasked as was the local Volunteer Marine Rescue (VMR) unit from Burketown. The aircraft located the vessel which proceeded towards the Albert River on its auxiliary engine having suffered a gearbox problem with the main engine. All persons onboard were confirmed safe. The incident coordination was transferred to Townsville Water Police who later advised that the vessel had been towed back to Burketown.

**Details of Incident:**

10 nm East off Kennebunkport, ME, USA

The fishing vessel , with two persons on board, sprang a leak in a pipe in the engine room and began taking on water. The crew made a radio mayday call. The Coast Guard District 1 Rescue Coordination Center launched a small boat and a helicopter from Station Cape Cod and diverted a cutter already in the area to the scene. When they got to the scene, a Good Samaritan vessel was taking the two persons onboard. When the fishing vessel sank its EPIRB activated and was detected by the Cospas-Sarsat System. There were no injuries.

**Details of Incident:**

Cairns, Queensland, Australia

The RCC Australia received an initial 406 MHz distress beacon detection in the Cairns area. The beacon was registered to a runabout, however the RCC Australia was unsuccessful in contacting the owner or any of the emergency contacts. The emergency Helicopter RSCU 510 was tasked and soon after Cairns water police advised that they had established mobile phone communications with the vessel. The registered beacon owner's son reported to police that his vessel broke down. Once Emergency Helicopter RSCU-510 located the vessel, the RCC Australia passed its position and overall coordination to Cairns water police. The vessel and occupants were recovered safely.

40 miles northeast of NAS (Naval Air Station) Fallon Airport, NV, U

The Cospas-Sarsat System detected a distress signal approximately 40 miles northeast of NAS (Naval Air Station) Fallon NV. The two people on board an aircraft were on a training mission. They lost control of their aircraft and manually activated their ELTs while ejecting. The Air Force Rescue Coordination Center (AFRCC) received the alert and contacted NAS Fallon. NAS Fallon was aware of the distress and dispatched rescue personnel to site. AFRCC confirmed the alert correlated with crash site and were informed that the pilots were recovered and were in good condition.

85 nm southwest off Unalaska, Alaska

The Coast Guard District 17 Rescue Coordination Center (CGD17) received a mayday call. The power fishing vessel Neptune I was grounded off the Island of Umnak with three people on board. They stated they were going to abandon ship, but upon deployment of their life raft into the water, it was torn up by nearby rocks. They stated they were going to swim ashore. CGD17 advised them to activate their EPIRB and take it with them so they could be easily found ashore. The Cospas-Sarsat system detected a distress signal approximately 85 nm southwest off Unalaska. CGD17 diverted a cutter and a C-130 to the scene and further launched a helicopter to the location and rescued the three survivors on the beach. There were no injuries.

**Details of Incident:**

Belle Pass, LA, USA

The Cospas-Sarsat System detected a signal at approximately 3 nm South off Belle Pass. The fishing vessel collided with the F/V Star Ocean. The F/V Star Ocean immediately sank. The fishing vessel recovered all of the persons onboard the F/V Star Ocean safely and notified Coast Guard Sector New Orleans of the incident. The D8 Command Center contacted the owner of the F/V Star Ocean and verified the beacon was onboard and sank with the vessel.

**Details of Incident:**

10 nm NW off San Bernardino, CA, USA

The Cospas-Sarsat System detected a distress signal. Two men were hiking in the San Bernardino National Forest when one of the hikers fell and injured his leg. The hikers activated their PLB when they were unable to walk back together. The Air Force RCC (AFRCC) received the first alert from the Cospas-Sarsat System and contacted the California Emergency Management Agency, which then contacted the County Sheriff's department and rescued the hikers. Both hikers were treated for minor injuries.

**Details of Incident:**

200 miles SW off Anchorage, Alaska, USA

The fishing vessel Cyclone made a Mayday call when it began taking on water. The vessel capsized and all three passengers on board abandoned ship. Coast Guard District 17 (CGD17) received the Mayday and issued a UMIB. CGD17 was preparing to launch a helicopter when it learned that a Good Samaritan, another vessel, responded to the UMIB and rescued all three people. CGD17 then received the alert and correlated it with active rescue case. No reported injuries.

**Details of Incident:**

10 nm off shore Knobby Head, Australia

The emergency contacts confirmed that the beacon was registered to a private vessel engaged in fishing offshore Knobby Head. Fremantle Water Police were contacted and they confirmed that a VHF call had been relayed from the vessel indicating they were broken down and required a tow. Police had tasked Volunteer Marine Rescue Port Denision to respond. As there were no direct communications with the disabled vessel, the RCC tasked a local helicopter from Dongera. The VMR vessel later arrived on scene and towed the disabled vessel safely back to shore.

**Details of Incident:**South Alligator River, Northern Territory, Australia

A 406 MHz distress beacon was detected in the vicinity of the mouth of the East Alligator River. The inquiries revealed that the beacon owner departed alone from Jabiru with the intention of fishing in the South Alligator River. The RCC tasked the Darwin Dornier Careflight helicopter and the Jabiru Police vessel to go to the area. An airborne RAAF C130 was also diverted to the area to assist in the search. The C130 crew located the male on a beach near the mouth of the East Alligator River and the Dornier then dropped a radio for communications with him. The male overturned his tinny which sank. The Dornier remained overhead and awaited the man to be taken to safely onboard a nearby fishing vessel. The police vessel then met with the fishing vessel, transferred the survivor and transported him back to Jabiru.

**Details of Incident:**Darnley Island, Torres Strait, Australia

The RCC Australia diverted surveillance helicopter VH-CWP to the distress position. The police vessel Conroy and Australian customs vessel Holdfast Bay were also tasked by RCC. A short time later VH-CWP located a banana boat with the active beacon and six persons on board. The vessel had broken down and was adrift. ACV Holdfast Bay was released from tasking whilst police vessel Conroy continued to the position and took the stricken vessel in tow back to Darnley Island.

**Details of Incident:**55 nm NW off Pinar del Rio, Cuba

The sailing vessel Hokulani was severely damaged due to heavy seas. The Master was unsure if he could make it ashore safely and manually activated his EPIRB. The Master then contacted Coast Guard District 7(CGD07) to report the situation. CGD07 received the first alert from the Cospas-Sarsat System and directed Air Station Miami to launch a HC-144 aircraft and requested assistance from the AMVER vessel C/S Norwegian Star. The HC-144 and the C/S Norwegian Star arrived on scene and the C/S Norwegian Star rescued both people onboard the Hokulani. The C/S Norwegian Star returned both survivors to Tampa, FL with no reported injuries.

62 nm SE off Barrow, Alaska, USA

The driver of a disabled snow machine was not carrying an emergency beacon. A convoy of trucks traveling overland from Deadhouse to Barrow, Alaska observed the individual on the disabled snow machine. One of the truckers activated his PLB when he recognized the snow machine driver was showing symptoms of hyperthermia. The trucker called Barrow Police via satphone to report the situation. North Slope Borough (NSB) Search & Rescue received the first alert from the Sarsat system and responded with a B412 helicopter which flew to the snow machine driver at the provided Sarsat coordinates. The snow machine driver was flown to Barrow and released to medical personnel.

**Details of Incident:**

20 nm SE off Everglades Airport, Florida, USA

The owner of sailing vessel sent out a SPOT stating he was in distress when his vessel demasted. The owner of the vessel also activated his EPIRB when the SPOT coordinates failed. Coast Guard District Seven (CGD07) received both alerts and was able to correlate the 406 MHz signal with the initial SPOT report. CGD07 contacted the wife of the registered beacon owner after they were alerted through the Cospas-Sarsat System. The wife informed CGD07 that she had called 911 and was transferred to Sector Saint Pete after she received a SPOT distress from her husband stating that he needed a tow. She had also called in a tow boat to assist. CGD07 called Sector Saint Pete and informed the owners that Sector Key West (SECKWT) will be handling the case. CGD07 diverted AIRMIA MH-65 to the Cospas-Sarsat coordinates and remained on scene until the tow boat arrived. The tow boat gained a visual of the vessel and notified SECKWT that they would tow it with the two survivors on board. No injuries reported.

**Details of Incident:**

400 nm SE off Miami, Florida, USA

Coast Guard District Seven (CGD07) received the SARSAT alert at 1529 UTC from the sailing vessel Fantasy Name Poseidon Elusive. The Cospas-Sarsat alert correlated with the owner name and position of a SPOT alert transmitted from the vessel. CGD07 notified the Royal Bahamian Defense Force (RBDF). The RBDF launched a small boat in search of the distressed vessel and was completed with negative results. CGD07 requested permission from the RBDF to search in the Bahamian area and launched a MH-60 helicopter to the Cospas-Sarsat coordinates. The helicopter located the owner and the demasted and capsized vessel. The owner informed CGD07 that he managed to get ashore when his engine failed six days before. No injuries reported.

**Details of Incident:**

Devenport, Tasmania, Australia

The Tasmania Police advised that Tamar Radio received a distress call from two people who were believed to abandon their small craft after grounding it on the North East coast of Tasmania. At the same time the RCC Australia received a beacon detection from an EPIRB in the same area. The Essendon Dornier Rescue 431, Police Helicopter Polair 71 and the Georgetown Police vessel were tasked to the area. The tug GO RIGEL enroute to Bell Bay diverted to the location after receiving the urgency broadcast issued by RCC Australia. Two survivors were subsequently located safe and well in a remote area ashore. They were rescued by the police launch who transferred them to Georgetown. All rescue assets then stood down.

<b>Details of Incident:</b>			

Dundee Beach, Australia

An unlocated alert was received from an emergency beacon registered to a small vessel. The enquiries with the owner's next of kin indicated that the vessel had four persons onboard and was on a fishing trip between Dundee Beach (Finniss River area) and Darwin. The RCC issued a broadcast and requested the NT Water Police conduct enquiries. The next satellite detection of the beacon indicated that it was in the vicinity of Blaze Point south of Finniss River. The Darwin Dornier and vessels in the vicinity were tasked to respond. The Darwin Dornier located the vessel at anchor showing no obvious signs of distress. Shortly afterwards the Dornier reported that another fishing vessel was attending and that the distressed vessel was suffering engine problems. All four crew were safely recovered by the fishing vessel and transported to safety.

**Details of Incident:**

25 nm West off Willapa Bay, Washington, USA

The beacon belonged to the fishing vessel Lady Cecilia with four persons onboard. The Coast Guard District 13 Rescue Coordination Center (CGD13) launched an MH60 helicopter from Air Station Astoria, which arrived on scene and located a large debris field that included a fully inflated life raft with canopy. The EPIRB was visually located 200 yards from the life raft in the middle of the 500 by 2000 yard debris field. The helicopter deployed a rescue swimmer who boarded the life raft. There was no one on board the life raft or evidence that anyone had been on board. Coast Guard resources including MH60 and MH 65 helicopters, three 47' motor life boats, one C-130 fixed wing aircraft, and the Coast Guard Cutter Fir conducted 19 searches totaling 91.8 hours. None of the four crew members were found. The search was suspended. The Cospas-Sarsat signal was the only notification the CGD13 received that this vessel was in distress.

**Details of Incident:**

117 nm SE off Barrow, Alaska, USA

The Cospas-Sarsat System detected a registered 406 MHz PLB distress signal. Stuck in extreme weather conditions, two people contacted the North Slope Borough (NSB) and activated the NSB registered PLB. In the conversation with the NSB the two people decided they did not require rescue and silenced the PLB. AKRCC received the Cospas-Sarsat alert and contacted the NSB. The NSB explained the situation to AKRCC.

**Details of Incident:**Ameson Navigational Aid, Ontario, Canada

An encoded ELT position was detected by GOES West and registered to an EC-130 helicopter belonging to the province of Ontario Ministry of Natural Resources. The beacon ceased transmitting 10 minutes later. First position was 0.2 nm from actual location. The RCC Trenton contacted the company who confirmed that a helicopter crashed while carrying out a netting operation near a Navigational Aid west of Ameson, Ontario. A company helicopter brought the three passengers on board back to base. RCC acknowledges that the Cospas-Sarsat System was the only alerting agency.

Lake Olive in Tasmania, Australia

A satellite detected a beacon in the vicinity of Lake Olive in Tasmania. The enquiries found it was a hired beacon to a bushwalker. Helicopter Polair-71 was in flight enroute to another job and was able to divert to the scene. They found a 65-year old male who had a severe allergic reaction. The victim was taken to hospital.

**Details of Incident:**

13 miles off Gobernador Gregores City, Argentina

A couple was traveling from Chile to Argentina in a van Toyota. The vehicle suffered an accident on the way and turned over. The driver of the vehicle could not escape; the passenger escaped and turned on the PLB beacon. The ARMCC received the alert and passed it to the RCC Comodoro Rivadavia. The RCC called the search and rescue office. The Office of Rio Gallegos called the police and the medical center. The driver was transferred to medical center of Gobernador Gregores in the ambulance.

<b>Details of Incident:</b>			
<u>South Tasmania, Australia</u>			

A satellite detected a hire beacon at Lake Judd in southern Tasmania. The beacon was identified as coming from a party of five bushwalkers. Helicopter Polair-71 was tasked for homing and rescue but was unable to winch into the area due to severe turbulence. The police organised a ground party search and the RCC tasked Dornier Rescue 431 to attempt a satellite phone drop prior to dark. Rescue-431 was unable to drop the phone and the police ground crew arrived in the area around first light. Polair-71 was retasked and eventually retrieved the hikers and brought them to a police vehicle. The incident coordination was transferred to Tasmania police and the SAR phase was cancelled.

**Details of Incident:**Near Trois Rivieres, Quebec, Canada

An unlocated ELT was detected by GOES East. The beacon was registered to a helicopter which had force landed on a railroad track and subsequently rolled over causing minor damage near Trois Rivieres, Quebec. Upon contact with the registered owner, JRCC Trenton was able to quickly find out that police were already notified and was able to talk to the pilot and confirmed that the police were on scene. The one person on board was uninjured. The beacon was turned off prior to getting a Doppler position. RCC acknowledges that the Cospas-Sarsat System was the first alerting agency.

**Details of Incident:**Pt Nepean, Australia

The fishing vessel sank in the vicinity of Pt Nepean near the entrance to Port Phillip Bay. The crew on board issued a mayday call via VHF 16. This call was intercepted by a passing vessel that diverted and conducted rescue operations of all six crew members. At the same time the RCC received a satellite detection of a 406 MHz EPIRB that was registered to the vessel. The beacon was in a liferaft that drifted away from the stricken vessel and was never recovered. The stricken vessel had approximately 30 000 litres of diesel fuel on board at the time of its sinking. The Melbourne Authorities coordinated all matters relating to the distress and the subsequent pollution response.

**Details of Incident:**

28 nm NW off Seattle, Washington, USA

A aircraft with one person onboard crashed shortly after take-off from Bellingham International Airport (KBLI). Before crashing, the pilot of the aircraft notified Seattle Air Traffic Control (ATC) about engine problems. ATC contacted the Skagit County Sheriff's Department Emergency Management Services (EMS) and gave them the aircraft's last known radar position. ATC also notified the Air Force Rescue Coordination Center (AFRCC) about the situation. EMS located the crash site and rescued the pilot. The aircraft's ELT was automatically activated in the crash. AFRCC received the Cospas-Sarsat alert and called back to Seattle ATC, who confirmed the distress and notified AFRCC about the rescue.

**Details of Incident:**

1.2 nm West off Guess Lake, British Columbia, Canada

A registered ELT was detected by GOES West. The beacon was registered to a Cessna 170. The aircraft departed Terrace, BC for Guess Lake, BC. The pilot called Victoria rescue coordination Centre and informed them that he had landed short of the runway at Guess Lake and slightly bent the aircraft. No injuries and no assistance were required. A friend with another aircraft would recover him. The Cospas-Sarsat position was 2.4 nm away from the actual location. RCC acknowledges that Cospas-Sarsat was the only alerting agency.

**Details of Incident:**

4 nm SE off Point Peter Lake, Ontario

An EPIRB with an encoded position was detected by GOES East and West and registered to the USA tug Patrice Mcallister. The Trenton RCC was already working the case from information received by US coast guard sector Buffalo that the tug was on fire with six people on board. Griffon helicopter hoisted one patient on board with 90 percent of body covered in burns. Patient was taken to Belleville hospital, other people on board, recovered by coast guard vessel Cape Hearne and taken to Kingston. The RCC acknowledges that the Cospas-Sarsat System provided supporting data.

**Details of Incident:**

West off Springbank, Alberta, Canada

The RCC Trenton contacted the helicopter company and through an investigation found that a helicopter with five passengers on board had crashed on the side of the mountain. A Squadron rescue helicopter was launched along with a company helicopter. The bad weather at the crash site hampered the rescue helicopter from slinging casualties for over an hour. A company helicopter from Alpine Helicopters evacuated five passengers. There were four survivors and one fatality. After action reports based on MEOSAR experimental data indicated that the helicopter crashed over an hour before first detection. There were no LEO satellites in visibility between and the beacon was detected on the first available pass. There were no GOES detections. Some LEO passes to the East were not detecting the beacon, however, all overhead and westerly passes continued to detect the beacon. JRCC acknowledged that the Cospas-Sarsat System was the only reporting agency.

**Details of Incident:**

68 nm SE off Montauk, New York, USA

The fishing vessel Shamrock, with four persons onboard, began taking on water. Coast Guard District One (CGD01) received a mayday call on VHF channel 16. CGD01 requested they activate their EPIRB while they organized the rescue. CGD01 launched a helicopter, fixed wing aircraft and CG Cutter Tigershark. The helicopter located the vessel and lowered three de-watering pumps. The people onboard were able to get most of the water out, seal the flooded forward compartment and proceeded to Montauk escorted by the Tigershark. No injuries reported.

**Details of Incident:**

Telluride Regional Airport, Colorado, USA

An ELT on an aircraft with tail number was activated when the aircraft went off the runway due to hard landing. The Air Force Rescue Coordination Center (AFRCC) received the SARSAT alert and contacted the registered owner. The registered owner informed the AFRCC that the plane was sold and provided contact information of the new owner. The AFRCC contacted the Fixed Base Operator (FBO) and the new owner. The new owner informed AFRCC of the hard landing and that he notified the National Transport Safety Board (NTSB). No injuries reported.

**Details of Incident:**5 miles offshore from Cervantes, Western Australia

A registered distress beacon was detected offshore from Cervantes. The owner could not be contacted and the registration details were incomplete and did not contain any contacts or vessel information. A VMR boat and the Perth Dornier were tasked to the beacon location. Police was successful in locating the beacon owner who reported that he was rescued by a fishing boat after his dingy capsized. The owner and the boat were taken to Cervantes but all other gear was lost including the EPIRB which could not be deployed at the time. The Dornier located the beacon and provided positions to the VMR who recovered it.

<b>Details of Incident:</b>			

7 nm South off Port Campbell, Victoria, Australia

The RCC Australia received multiple detections of distress beacons associated with a sailing vessel. The vessel with six persons onboard was taking part in the Queenscliff to Port Fairy Yacht Race. The checks with Melbourne Water Police confirmed that the vessel suffered damage, lost its liferaft and was sinking. A second yacht diverted to assist and reported sighting of a distress flare from the first yacht. It was determined that Melbourne Water Police should retain overall coordination and RCC Australia assumed aviation coordination for the incident. The Essendon Dornier and Rescue Helicopter from Warrnambool were tasked to respond. A broadcast to shipping was issued and the anchor handling tug was tasked to proceed. Due to severe weather conditions it was not possible to locate the crew of the distress yacht. After a search of the area it was confirmed that all six crew members were recovered from the water, one was reported to have mild hypothermic symptoms. Due to risks associated with transfer at night it was determined that the distressed crew should remain on the second yacht and they were transported back to Port Fairy. The distressed vessel was confirmed to have sunk.

<b>Details of Incident:</b>			

22 nm southeast off Hilo, Hawaii, USA

The power fishing vessel, with one person on board, became disabled and adrift. The captain made a Mayday call to Coast Guard Station Hilo and gave his GPS position. The station contacted the Hawaii County Fire Department, which had a ship in the area searching for a lost swimmer. The station also contacted the Coast Guard District 14 Rescue Coordination Center (CGD14). The captain of the vessel then activated his EPIRB, to make it easier for the Fire Department ship to find him. The Fire Department ship located the distressed vessel without using the Cospas-Sarsat data and towed the vessel to port.

**Details of Incident:**

13 nm SE off Yeppoon, Great Keppel Island, Australia

An unregistered PLB was detected in the vicinity of Great Keppel Island. The Yeppoon Police were contacted and the Rockhampton Rescue Helicopter was tasked. Following contact with the Yeppoon Marine Rescue Police confirmed that the beacon was activated by a small vessel with three persons on board that were swamped by a wave. Another vessel in the vicinity responded and rescued those on board transporting them back to Yeppoon. The Rescue Helicopter was released from tasking. The owners were going to make their own arrangements to recover the vessel.

**Details of Incident:**

50 nm East off Flinders Island, Australia

An unlocated alert was received from an EPIRB registered to a yacht. The Emergency Contact confirmed that the vessel had three persons onboard was on a voyage from Swansea to Sydney. Tasmania Police were contacted they were not aware of the vessel and had not received any calls. The beacon was subsequently located by East off Flinders Island Tasmania. The Hobart rescue helicopter (POLAIR 71) and Police Vessel Van Dieman were tasked to respond. The merchant vessel Castle Island was also diverted to assist. The helicopter arrived onscene first and reported sighting three persons onboard and no obvious signs of distress. They remained onscene until the Van Dieman arrived and recovered the three persons onboard. It was later confirmed that one of the crew was injured and the vessel lost its liferaft during significant weather.

**Details of Incident:**Karratha Airport, Western Australia

An emergency beacon was reported by aircraft in the Karratha area. Later a satellite detection was received from an unregistered 406MHz EPIRB on East Lewis Island, northwest off Dampier. A local fixed wing aircraft was tasked to respond and the Fremantle Water Police were requested to provide a surface response. The aircraft reported sighting an upturned dinghy on the shore with no persons located, however a fishing vessel was located within 80 metres of the dinghy. Communication could not be established with the Fishing vessel which was already making way towards Dampier. An airborne Helicopter was then diverted to assist with the search. Later it was confirmed that the beacon was related to a swamped vessel with three persons onboard. The vessel was located by the fishing vessel which rescued all three persons and returned them to the Dampier boat ramp.

**Details of Incident:**

Point Blaze, Northern Territory, Australia

The RCC Australia received an EPIRB detection in the vicinity of Point Blaze. The beacon was registered to an aluminium runabout, however the beacon owner confirmed that the vessel and beacon were sold. The RCC Australia tasked a Careflight Helicopter from Darwin and contacted the Darwin Police. They confirmed that they responded to a small craft which was broken down in the area of the beacon detection. The police agreed that the helicopter should continue with the task. It subsequently located the vessel with two persons on board. The helicopter dropped a Satphone and subsequently confirmed that the vessel was broken down for two days. A local fishing vessel responded and towed the broken vessel and its crew safely back to Dundee Resort.

<b>Details of Incident:</b>			

Northwest Territory, Australia

The Cospas-Sarsat System detected a beacon owned by the Department of Families Housing Communities and Indigenous Affairs. The Beacon was registered to one of their employees in a Toyota Hilux. Jayrow Helicopters from Gove were tasked to respond with a local police officer. The helicopter was unable to locate the target. Shortly after they landed, a resolved position was achieved. A ground party of police and RIO mine personnel were tasked and located the occupant of the vehicle bogged but in good health.

**Details of Incident:**25 nm South of Warrnambool, South Western Australia

An unregistered Australian coded 406Mhz distress beacon was detected offshore Warrnambool. The Warrnambool based rescue helicopter and Essendon Based Dornier aircraft were tasked to proceed to investigate the detection. An Urgency broadcast was issued and subsequently information was received from a merchant vessel stating that their vessel proceeded to the distress location. It was believed to be a broken down open fishing boat called with two passengers on board. The merchant vessel was closed to the location, therefore the Essendon Dornier was stood down. The helicopter continued and maintained overwatch awaiting the arrival of the merchant vessel. The RCC were advised that a second private pleasure boat also proceeded to assist with a tow back ashore. The Victoria Water Police requested to activate Warrnambool Coast Guard vessel to assist with the tow ashore. The vessel was safely towed back to safety.

**Details of Incident:**Mourilyan Harbour, Queensland, Australia

The RCC Australia detected the activation of an unregistered EPIRB in vicinity of Mourilyan Harbour. The Cairns Water Police advised that Innisfail police and Mourilyan VMR were aware of two adults who reported being stranded ashore after they experienced difficulties with their dinghy. The Cairns Dornier rescue helicopter Rescue 510 and a VMR vessel were tasked. The VMR vessel was the first on scene and advised that they had conducted a successful recovery of two people from the beach.

**Details of Incident:**

Fremantle, Western Australia

The active beacon was detected in vicinity of the Special Purpose Vessel Southern Supporter. Helicopter Rescue-65 was tasked and Fremantle Water Police contacted Southern Supporter who subsequently recovered gear and proceeded to the distress location to find a vessel with one person onboard. Southern Supporter remained on scene until the Rockingham Volunteer Marine Rescue arrived and provided assistance. The RCC Australia then handed coordination to Fremantle Water Police. The Fremantle Water Police later confirmed that the distressed vessel was towed to the mainland and the person was safe.

<b>Details of Incident:</b>			

Croajingolong National Park , Mallacoota, Australia

The Victorian Ambulance informed AMSA they instructed a party of hikers to activate their 406MHz distress beacon when one of their party became injured on a walk. A 406MHz distress signal was detected by the Cospas-Sarsat System. The Helicopter Lifesaver-3 was tasked to respond from Moruya. The injured hiker was winched and transferred to an ambulance at Mallacoota for treatment. The beacon was subsequently switched off and the remainder of the party continued on their hike.

<b>Cospas-Sarsat provided</b> <u>only alert</u>		<b>Beacon Registration Data Available</b> No	

**Details of Incident:**670 nm west-northwest off Guam, USA

The fishing vessel f/v Hsin Man Chun caught fire with nine people on board. The crew manually activated the EPIRB and notified a sister ship (which was 22 hours away) by radio that they were abandoning ship. The Rescue Sub-Center (RSC) Guam received the Cospas-Sarsat alert and later a call from MRCC Taipei about the distressed vessel. RSC Guam queried the Automated Mutual-Assistance Vessel Rescue (AMVER) database and discovered the Marshall Island flagged bulk carrier, M/V Semirio was approximately 40 nm from the F/V Hsin Man Chun. The Master of m/v Semirio agreed to divert and assist the f/v Hsin Man Chun. RSC Guam also worked through US DOD channels and diverted a Navy P-3 Orion aircraft stationed at Kadena Air Base, Japan to assist. The aircraft spotted seven crew members in a life raft and two more on the bridge of the burning vessel. The Navy P-3 deployed a life raft to assist the crew members remaining on the burning vessel. The Navy P-3 flew cover while the M/V Semirio recovered the nine crew members from the F/V Hsin Man Chun.

**Details of Incident:**Mueller Pass, Southern Alps

A resolved position alert was received for a registered PLB. The beacon owner's partner was able to confirm there was a party of four hunters that had been dropped into the area a few days ago by James Scott, a Fox Glacier based helicopter operator. James was contacted and tasked to the position where he uplifted a hunter with a dislocated shoulder and transported him to Franz Josef for medical attention.

**Details of Incident:**Pearland Regional Airport, Houston, Texas, USA

A Bumford Royer Christen Eagle II with one person aboard crashed into trees immediately after taking off from KLVJ Airport. The airport personnel witnessed the crash and contacted local Emergency Management Services (EMS). EMS located and airlifted the pilot to a local hospital. The Air Force Rescue Coordination Center (AFRCC) received the Cospas-Sarsat alert and contacted KLVJ personnel. KLVJ personnel informed AFRCC about the crash, and that local EMS had already responded.

**Details of Incident:**

Ninety Mile Beach

RCCNZ received an encoded alert for a PLB activated on the beach at the northern end of Ninety Mile Beach - this was quickly followed by a call from Ambulance North Comms, advising they were responding to a call in this location and that a beacon had been activated, a person had been reported unconscious. RCCNZ agreed that Ambulance should continue to coordinate as they received the initial notification. Ambulance had tasked the NEST rescue helicopter out of Whangarei and a road ambulance was also responding. The helicopter located a group who were walking down 90 mile beach to Kaitia one of them developed heart problems and became unconscious, he was transported to Whangarei Hospital.

#### Details of Incident:

North Page Island, Backstairs Passage, South Australia

An EPIRB beacon was detected in the vicinity of the Page Islands. The registered emergency contact confirmed that the beacon was associated with a runabout, which was on a fishing trip with two people on board. The RCC tasked the rescue helicopter RSCU51 from Adelaide and volunteer marine rescue vessels from Kangaroo Island and Victor Harbour. The helicopter located one male on North Page Island, who swam ashore following capsizing of the runabout. A short time later a charter vessel located the second male clinging to the overturned hull of the vessel. Both persons were taken ashore and assessed by ambulance. The vessel was then taken under tow by volunteer marine rescue.

**Details of Incident:**15 nm SE off Hamilton Aerodrome, Victoria, Australia

An inflight emergency was declared by Melbourne Air Traffic Control for a Cessna aircraft with two persons on board. The aircraft was stuck on top of a solid cloud with last light approaching and was uncertain of its position. The pilot found a hole in the cloud layer and descended where it was still poor weather and decided to land in a paddock. The Dornier Rescue-471 was diverted by the RCC to the area to assist. The aircraft reported that it landed safely with no injuries or aircraft damage. The pilot was uncertain of their location and was requested to switch on their distress beacon. The beacon was detected by satellite and homed to by the Dornier helicopter. The police attended the scene and took a statement from the pilot. ATSB was advised.

**Details of Incident:**158 nm SE off Raleigh, North Carolina, USA

The pleasure vessel suffered complete electrical failure and the crew of four manually activated the vessel's EPIRB. Coast Guard District 5 Norfolk (CGD05) received the unlocated alert, and contacted the vessel's owner who confirmed that the vessel was not in port. CGD05 made radio call outs for the Fish Tales, which were answered by a Good Samaritan vessel in visual contact with Fish Tales. The Good Samaritan provided CGD05 with their position via sat phone and CGD05 dispatched CG 47211 a 47 foot motor life boat. CG47211 located the Fish Tales, towed it into Beaufort inlet and transferred the tow to Sea Tow, which towed it into port.

**Details of Incident:**Amarillo International Airport (KAMA), Texas, USA

The Cospas-Sarsat System detected a 406 MHz ELT at the Amarillo International Airport (KAMA), TX, USA three days after a Bell 206B Helicopter crashed when attempting to land at the airport. Air Force Rescue Coordination Center received the Cospas-Sarsat alert and contacted the airport. The airport officials told AFRCC about the crash on 26 April, but could not explain how the beacon was activated three days later.

**Details of Incident:**Credlin Reef, Queensland, Australia

The RCC Australia received a report that a fishing vessel had run aground. The RCC established communications with the vessel and confirmed it was in distress and that all six crew were safe but were sitting on the vessel's side. A broadcast to shipping was issued and the car carrier Eurasian Highway proceeded to the vicinity as a standby rescue platform. The Cairns Dornier arrived on task and established communications with the survivors confirming that the vessel was on its side and two of the crew were on the hull and the remaining four were onboard a dingy. Both the Dornier and Eurasian Highway then stood by the survivors awaiting first light when a rescue could be conducted. In addition the Customs vessel Ocean Protector and two VMR boats responded to the broadcast and proceeded to the scene. At first light the rescue helicopter Rescue 422 arrived on scene and stood by with the Cairns Dornier Rescue 441 as the fishing vessel refloated on the high tide. Rescue 422 was then released as Rescue 441 remained overhead as the fishing anchored near-by to assess any damage suffered during the grounding. After confirming minimal damage and no pollution, both Rescue 441 and Rescue 521 were released to return to their bases.

**Details of Incident:**

Dirk Hartog Island, Western Australia

A distress beacon registered to a six metre boat was detected on Dirk Hartog Island. The intelligence revealed that the boat sank two days earlier and the two survivors were assisted by other friends in another boat to safety. The two men set up a camp on the beach while the other boat returned to Denham to seek assistance. They planned to pick up the survivors on their return. There were no contact with the men since the accident. The Perth Dornier and the Shark Bay VMR were tasked to the position. On arrival it was found out that the beacon was activated by the two survivors to ensure that the rescue was on its way. The RCC decided to have both men returned to Denham onboard the VMR boat.

**Details of Incident:**

55 nm NW off Kalbarri, Western Australia

The Kordia Radio received a mayday relay from a fishing vessel which informed of a sinking vessel in the vicinity with two persons onboard. The passengers decided to abandon the sinking vessel. The fishing vessel in the vicinity headed toward the distress location. The Cospas-Sarsat System detected a EPIRB registered to the yacht . AMSA Dornier Aircraft located two persons in kayaks at beacon position. Shortly after, the Fremantle Water Police recovered two persons in kayaks and transported them to Kalbarri.

**Details of Incident:**

Townsville, Queensland, Australia

The RCC Australia received a detection of an Australian coded and registered 406 MHz distress beacon in the Townsville area. Telephone calls confirmed that the vessel associated with the registered beacon was used by the beacon owner and that there were three people onbaord the vessel. Subsequently information was received from police that they received reports of an overturned vessel with three person in the water. The police confirmed communication with a vessel and also alerted the Townsnvile based EMQ helicopter. The RCC Australia tasked Rescue-521 and confirmed they were homing to the distress location. The RCC Australia laster received advice that three person were safely winched by Rescue-521 and returned to their base.

**Details of Incident:**Point Stewart, Northern Territory, Australia

A distress beacon was detected in the vicinity of Point Stuart. It was registered to a charter boat company for use onboard an open boat. Two aircraft were diverted in flight, one from Defence and the other from Coastwatch, which located the vessel but could not communicate with it. The vessel shot fire flares indicating a distress. The RCC tasked the Darwin Dornier, a rescue helicopter and Police boat to respond to the incident. Once the vessel was located, it was found out that the nature of distress was a mechanical breakdown and all persons were safe. The coordination was handed over to the water police and all passengers and crew were taken ashore.

**Details of Incident:**

Dawson, Yukon Territory, Canada

The aircraft was based out of Whitehorse and the RCC Victoria was informed. The investigation revealed a Cessna-206 was overdue on a flight to Dawson city from a camp at Coffee creek. The aircraft had suffered an engine failure and force-landed on a sandbar in the Yukon River. One of the three passengers suffered minor back injuries. The pilot contacted his dispatch with a passenger's SAT phone. The pilot's dispatch contracted true north helicopters to respond. Two helicopters with two medics were dispatched rapidly to the location provided by the Cospas-Sarsat System. The passengers and pilot were rescued and transported back to Dawson city.

The Australian coded and registered distress beacon was detected offshore from Jurien Bay. The Rescue-481 Dornier and Rescue-65 Helicopter from Perth were tasked to investigate the resolved position. The Jurien Bay VMR vessel was also tasked and arrived on scene but could see no signs of distress. Rescue-481 acquired weak signal and homed to overturned vessel with two persons sighted on upturned hull. The VMR Jurien Bay effected rescue and subsequently took overturned vessel undertow back to boat ramp. Both Rescue-65 and Rescue-481 were released from task and returned to base.

**Details of Incident:**

75 nm Northeast off Newcastle, New South Wales, Australia

The RCC Australia detected an unregistered 406 MHz distress beacon northeast of Newcastle. A conversation with Sydney Water Police indicated that they were already aware of a possible distress call being made over VHF 16 from a vessel with three persons onboard in the same approximate area. The RCC Australia were contacted by a local merchant vessel which relayed communications from the distress vessel. RCC were made aware that two of the persons onboard were severely sea sick. The vessel had fouled both of its propellers and was unable to proceed ashore without assistance. A Westpac helicopter Westpac 2 and a local police boat were tasked to the scene by RCC Australia. The helicopter winched the two sick crew members onboard the helicopter and transferred ashore for medical attention and the police boat towed the vessel back into Forster.

**Details of Incident:**

Between Kelowna and Merritt, British Columbia, Canada

GOES-East detected 406-beacon registered to DHC-2 beaver (on floats) out of Pitt Meadows British Columbia. Investigation by RCC Victoria quickly discovered that the aircraft had just crashed on highway in Okanagan Valley near Kelowna with three passengers and was on fire. On scene witnesses reported at least three explosions after the crash. The three passengers were confirmed deceased by coroner. The aircraft and beacon were destroyed by post-crash fire. RCC acknowledged that the Cospas-Sarsat System was the first alerting agency.

**Details of Incident:**

Stirling Range, Western Australia

The Cospas-Sarsat System detection of a 406MHz beacon was received in the Rescue Coordination Centre. The beacon belonged to a party of four hikers who were trekking in the Stirling Ranges. The weather and terrain delayed a rescue response until first light. During the night the Rescue Coordination Centre was informed by the party that they made their own way back to their car. One of their party suffered from hypothermia and was required to be carried out by the rest of the party. Once warmed up in the car, the injured hiker did not require further treatment.

**Details of Incident:**

Dawson Yukon Territory, Canada

A Cessna-206 was returning to a mining camp near Dawson city, Yukon Territory. The pilot lost control on landing due to high crosswinds and crashed. The Cospas-Sarsat System's first detection was by GOES 15. The RCC Victoria called CMCC to report the crash shortly before the first elemental was formed. The beacon was not registered by USMCC and the beacon was turned off before ambiguity was resolved. The RCC Victoria reported that the aircraft was substantially damaged and there was one person on board with no injuries.

**Details of Incident:**

Gau Island, Fiji

The RCC Australia received a HF DSC alert from a yacht, which was on a delivery voyage from the USA to New Zealand. Shortly after receiving the DSC alert a USA coded PLB and the a USA coded EPIRB were detected in a simular area. MRCC Suva Fiji held overall coordination for the incident but due to no aviation assets available to the Fiji SAR authority, the RCC Australia tasked and paid for a Fiji based seaplane to respond and advise about the situation onscene. Once overhead, the seaplane confirmed that three crew were safe. The Fijian Navy patrol boat was enroute to their location to assist as tasked by MRCC Suva. The RCC Australia was later advised by MRCC Suva that the three crewmembers were safe and well onboard the navy patrol boat bound for Suva. A salvage attempt of the yacht would be made the following day.

Mount Baw Baw National park

A distress signal was initially heard by high flying aircraft and was followed by a satellite detection of a registered beacon. Emergency contacts confirmed the owner and friend were on a camping trip. The companion suffered hypothermia and they made an emergency call. A contact with the ambulance service and the Victorian police RCC confirmed that they were responding to the call. The coordination was transferred to the Victorian police who organised a ground response.

**Details of Incident:**5 nm North off Magnetic Island, Queensland, Australia

The RCC Australia detected activation of an EPIRB. No position was initially received but contact with NOK indicated that the vessel was at sea in vicinity of Magnetic Island. Further information received from QLD fisheries confirmed the vessel's last position. A helicopter from Townsville was tasked to proceed to the last known position of the vessel and reported seeing two people in a life raft after they fired flares. Townsville Water Police launched a police vessel to the position to recover survivors in the raft. The Cairns Dornier was also tasked, however the two survivors were recovered before arrival and brought back to Townsville by the police.

**Details of Incident:**Terrace, British Columbia, Canada

The Cospas-Sarsat System detected an unlocated ELT registered to a Eurocopter out of Fort St. John, British Columbia. RCC Victoria was advised and through discussions with the company, learned that the helicopter was scheduled to fly near Terrace, British Columbia. A Buffalo and Cormorant from 442 Squadron were launched. The company helicopter was the first on scene and confirmed the crash site. Three passengers were deceased due to a violent impact on mountain side. RCC acknowledged that the Cospas-Sarsat System was the only alerting agency.

**Details of Incident:**56 nm SE off Gladstone, Australia

The RCC Australia received an unlocated detection of a beacon registered to a sailing vessel. The registered emergency contact confirmed that the vessel was on a voyage from Brisbane to Yeppoon with one person onboard. The Gladstone Water Police were contacted and they confirmed that they had been in communications with the yachtsman's wife. She had received a satellite phone call confirming that the yacht had sunk after hitting a submerged object and the skipper had abandoned into a tender and activated his beacon. The Bundaberg rescue helicopter (Rescue 512) was tasked to respond and police were requested to provide a surface response. Rescue 512 arrived on scene first and winched the skipper to safety. There were no signs of the yacht or reports of any pollution.

**Details of Incident:**

218 nm ESE off Hong Kong, China

An emergency call from the Royal Hong Kong Yacht Club reported that they received a mayday message from the sailing boat which had serious flooding and was in imminent danger of sinking. Eleven persons were onboard. The distress alert of the registered beacon was detected and fixed-wing aircraft was tasked to locate the target. SafetyNet and Navtex messages were promulgated; the Taipei RCC was informed and requested to provide assistance. Three ships in the vicinity responded and proceeded to scene. Hong Kong registered cargo ship reported to the HKMRCC that they discovered two life rafts and rescued total of 11 persons without injury.

**Details of Incident:**

Saibai Island, Queensland, Australia

An unregistered 406 MHz distress beacon was detected by satellite system in the Torres Straits in the vicinity of Saibai Island. Inquiries with QLD Police proved difficult due to complete communications outage in Torres Straits. Beacon resolved on land on Saibai Island. Subsequently, information received that a distress alarm was detected at the Saibai Island medical clinic. No helicopters were available to respond initially so Thursday Island Water Police were tasked to investigate. Rescue-700 Horn Island based helicopter subsequently became available and also proceeded Saibai on a medical tasking. Aircraft requested to listen for beacon on approach to island. Information later received indicated that beacon had been activated as a secondary means of alerting. Later confirmed that the beacon was located and switched off.

**Details of Incident:**

300nm East off Bermuda

A PLB from a sailing vessel activated 500 nm East of Bermuda. A contact with the vessel stated a passenger with chest pains was in need of possible medical assistance. When the American helicopter arrived overhead, the passenger started feeling better and planned to proceed to Bermuda with no assistance. A few days later the PLB activated again about 300 nm East of Bermuda. Another vessel tasked to assist and found one of two passengers had taken a raft out for a couple of hours and when he returned the other passenger was missing. The US Coast Guard vessel and US helicopter along with a commercial vessel began search pattern. USCG resources found nothing, search was called off, authorities were to meet vessel upon its arrival at Bermuda.

**Details of Incident:**

160 nm east off Fraser Island, Australia

RCC Australia was contacted by owner of 12 metre sloop with two persons onboard, who requested a tow as his steering gear had failed in bad weather. RCC advised a tow was not possible at that distance from shore but if he declared a distress and was prepared to abandon his vessel, a Merchant vessel could be tasked for a rescue. At first this was declined but a short time later with worsening weather conditions the vessel declared a distress. RCC issued a broadcast to shipping and tasked the Cairns Dornier to assist. Bulk Carrier Yahagi Maru drifting off Brisbane whilst enroute to Newcastle contacted RCC advising he was 5 hours away and would divert to distress position. Yahagi Maru rescued the two crewmembers and proceeded to Brisbane Pilot boarding ground to land the survivors. The sloop MEHITABEL was abandoned and a Navigation Warning was issued. Crew members were successfully transferred ashore in Brisbane.

**Details of Incident:**

45 nm South off Lands End, Cornwall, United Kingdom

The sole occupant of the Feferwolke voluntarily activated his PLB because he was unable to cope with the severe weather and sea conditions in the English Channel. The Falmouth Coast Guard were notified of the alert and a Royal Navy Seaking helicopter Rescue 193 was dispatched to the beacon position. A French Customs aircraft was diverted to scene, along with two merchantmen in the vicinity of the beacon. The Lizard lifeboat was also sent out to assistance. Rescue 193 winched the sole survivor from the vessel upon the request to abandon the vessel. The survivor was transferred back to the UK to RNAS Culdrose in Cornwall.

**Details of Incident:**

Orford Ness, 15 nm NE off Ipswich, Suffolk, England.

A Dutch sailing yacht ran aground at Orford Ness in Suffolk due to adverse weather and sea conditions. Helicopter R125 was deployed from RAF Wattisham and the Aldeburgh lifeboat to assistance with the emergency. The yacht was refloated with the help of the lifeboat crew and the helicopter winchman. They used pumps and towlines to refloat the yacht. The EPIRB beacon was lost overboard and was not recovered.

**Details of Incident:**

Gulch Island, Western Australia

An unregistered distress beacon was detected by satellite in vicinity of Cape Arid WA. RCC Australia issued a broadcast to shipping tasked a local helicopter, the Pearce based rescue helicopter and the Perth Dornier RSCU481 along with the Esperance Volunteer Marine Rescue. A Commercial fishing vessel responded to the broadcast and arrived on scene and found a small vessel with two persons on board aground on the rocks of Gulch Island. The commercial fishing vessel provided assistance and recovered the two persons in distress and RCC Australia subsequently released all aviation assets.

**Details of Incident:**

La Tuque, Quebec, Canada

The Cospas-Sarsat System detected an unlocated ELT by GOES East quickly forming a Doppler and composite position near La Tuque, Quebec. Investigations revealed that a single engine aircraft on floats with two passengers crashed. A Hercules, griffon and company helicopter was tasked to the location. Two passengers were airlifted to La Tuque hospital by R439 out of Bagotville and air ambulance helicopter, with minor injuries. SARSAT LEO / MEO / and GOES east detected throughout until ELT was shut off by SAR technician; GOES west did not detect. RCC acknowledged that the Cospas-Sarsat System was the first alerting agency.

**Details of Incident:**Maryvale, Northern Territory, Australia

A 406 MHz ELT was detected with initial positions in Western Queensland and South off Alice Springs. The beacon was confirmed as belonging to an R44 helicopter supporting the Finke Desert Race south of Alice Springs. An aircraft of opportunity was diverted and they confirmed the helicopter crash location. Northern Territory Police and race organisers responded to the incident. The crashed helicopter had four people on board including several with significant injuries. A stretcher equipped helicopter (also supporting the race) was used to convey medical personnel to the crash site. The same helicopter was then used to transport the most seriously injured person to Alice Springs with road ambulances conveying the remainder.

**Details of Incident:**19 nm East off Cape Byron, Australia

RCC Australia received a satellite distress beacon alert from a yacht with two persons onboard enroute the Central Coast New South Wales to Brisbane Queensland. An urgency broadcast was issued to shipping in the area. The yacht had earlier reported the same day it had been suffering engine problems and communication issues but did not require any assistance. Due to very rough weather no police vessels were able to respond and the bulk carrier Amarantha stood by at a safe distance as it was unable to rescue the 2 person due to the weather conditions. Two fixed wing aircraft the Cairns Dornier Rescue 441 and Careflight-230 and two rotary wing aircraft Rescue-500 and Lifesaver-2 were tasked by RCC Australia to act as top cover and as rescue platforms. With Lifesaver-2 acting as a backup Rescue 500 winched the two persons off the yacht and transported them to the mainland for medical checks and treatment. The yacht was left abandoned and a Sea Safety Message was issued to shipping in the area for the navigation danger it posed.

**Details of Incident:**Blue Mountains NSW, Australia

Australian coded PLB was detected in the Blue Mountains area. The enquiries revealed the beacon had been loaned out from a local visitor's centre to a bushwalker. The bushwalker also established mobile phone contact with Katoomba Police indicating that he was lost but would be safe overnight. Police mounted a ground response at first light. The walker was located safe and well and assisted out of the area. The beacon was deactivated.

**Details of Incident:**

Off Vava'u Island, Tonga

On a delivery voyage from Ireland to Australia a sailing yacht with two Australian crew ran aground on the Tongan Island of Late. The RCC Australia were alerted by the next of kin of one of the crew, who had received a phone call from the vessel advising that it was 'breaking up'. The Irish Coast Guard forwarded beacon alerts from an Irish coded EPIRB on board the vessel to RCC Australia which were then passed to the coordinating authority - RCC New Zealand. RCC Australia assisted with next of kin liaison and forwarding of beacon alerts to RCC New Zealand. A search of the distress location and land search of the island of Late failed to locate the missing crew members and the Search and Rescue Operation was suspended.

**Details of Incident:**

Coconut Island, Queensland, Australia

The RCC received an EPIRB detection from f/v Stirling-C in the Torres Straits near Coconut Island. Various enquiries made by the RCC revealed f/v Reality-3 was in the vicinity of f/v Stirling-C and confirmed that vessel was safe. Reality-3 crew then checked on the dories of Stirling-C and discovered one had broken down at Day Reef and activated the EPIRB he had "borrowed" from Stirling-C. The dory was towed back by the crew of Reality-3.

**Details of Incident:**Port Lincoln, South Australia

A request for assistance from SA Police was received regarding multiple Mayday calls heard on VHF Radio by VMR units in Port Lincoln area. A yacht with one person onboard reported to have suffered engine failure other damage and crew fatigue due to bad weather condition. No aircraft from Adelaide area was able to assist. The Rescue 471 Dornier was tasked to proceed and assist to locate and communicate with the distress vessel, however due to a mechanical defect on preflight Dornier was unable to assist. A merchant vessel transiting area requested to attempt communications. The RCC advised the yacht to activate its distress beacon. The merchant vessel subsequently diverted to scene and stood by vessel whilst SA Fisheries vessel Southern Ranger tasked by SA Police proceeded to location. The yacht was taken into tow back to Port Lincoln and the merchant vessel was released from the task.

<b>Details of Incident:</b>			

9 nm North off Rottnest Island, Western Australia

121.5MHz hearing reports received in the Perth area were followed by an unlocated detection of a registered EPIRB. The enquiries confirmed that the boat with three occupants went on a fishing trip. A rescue helicopter from Jandakot was launched to home the signal and a subsequent satellite detection gave a likely position. The police activated VMR and the helicopter winched the three crew from their upturned boat. VMR were unable to recover the vessel which sank.

**Details of Incident:**Carp, Ontario, Canada

An ELT detected by GOES-West was registered to a privately owned wag-aero tail dragger. RCC Trenton advised that they received a mayday call in Carp, Ontario shortly before the first detection. The sole occupant on board contacted the RCMP indicating that he had flipped his aircraft in a corn field. There was no LEOSAR coverage in that area. First Doppler location was received well after the RCMP was notified of the actual position. The pilot was uninjured and the beacon was turned off.

**Details of Incident:**

East off Cold Lake, Saskatchewan, Canada

A PLB was detected GOES-East and West registered to a private owner. The beacon continued transmitting throughout the night into the morning, where Industry Canada was able to home in on the signal and locate the hiker near Pierce Lake, Saskatchewan. The hiker felt sick during a nature walk and decided to lie down and activate his PLB. In the morning, after feeling better, decided to walk back to camp where he waited for his parents to pick him up. RCC acknowledged that Cospas-Sarsat was the only alerting agency.

**Details of Incident:**Offshore Portland Bay, Australia

VIC Police reported that they had been made aware of a vessel on fire in vicinity of the beacon position and had tasked Portland VMR which were at sea conducting an exercise in Portland Bay. The vessel was assisted prior to the arrival of Portland VMR by f/v Game on and f/v Viking II which recovered all eight passengers on board and returned them to shore in Portland. All passengers were safe with no injuries. Portland VMR took the vessel under tow which was reported as still burning with the intention of returning it to Portland. No beacon was recovered however the position reported by VMR correlates with the beacon resolved position. VIC water police took coordination of the incident and advised that the vessel had burnt to the waterline and sank.

<b>Details of Incident:</b>			

1.5 nm NW off Cape Bowling Green, Queensland, Australia

The RCC Australia detected the activation of an EPIRB beacon. The EPIRB was registered to a sailing vessel. A broadcast was issued for the area with no response. Townsville VTS established communications with the vessel via marine VHF radio and determined that the vessel had 2 people on board and had run aground on Cape Bowling Green. The rescue helicopter RSCU521 was tasked from Townsville as well as a volunteer marine rescue (VMR) vessel from Burdekin. The vessel had taken on water through a smashed port hole and was unable to be towed by VMR. Both persons were later conveyed to Townsville by VMR.

<b>Details of Incident:</b>			

Lake Germain, Quebec, Canada

The Cospas-Sarsat System detected an unregistered and unlocated ELT. The beacon was registered to a Bell-206 in Noranda, Quebec. The RCC Trenton was advised. RCC was able to contact the pilot directly by cell phone. The aircraft had rolled over on landing and the pilot contacted his family to be picked up. RCC acknowledged that the Cospas-Sarsat System was the first alerting agency. As the individual had a working cell phone no save was assigned.

**Details of Incident:**

Tagish Lake, Yukon, Canada

The Cospas-Sarsat System detected an unlocated ELT. The beacon was registered to a Horizon Helicopters Robinson R44 helicopter based out of Whitehorse British Columbia. RCC Victoria was advised. The company confirmed that their machine was conducting a bear survey and that they were tracking it on their 'spider web'. Since the position was not moving the company dispatched a helicopter to check. Shortly later, a call came in from one of the three passengers that they had crashed and there were two injured and one fatality. The company helicopter returned and picked up doctor and two paramedics and transported them to the scene. RCC acknowledged the Cospas-Sarsat System was the only supporting agency.

**Details of Incident:**

30 miles NW off Nalwarung Straits, Northern Territory, Australia

An unregistered distress beacon was detected approximately 30 miles to the North West of Nhulunbuy Northern Territory. An aircraft of opportunity was tasked to proceed to the location and on arrival it sighted two persons waving on a beach and a submerged vessel nearby. The Darwin Dornier and a local helicopter were also tasked. On arrival at the scene the helicopter landed and confirmed all survivors were accounted for and there were no injuries. The men reported that their 8m Fly Bridge Cruiser Black Magic had sunk and they had made it ashore in their tender. The helicopter took the survivors to Gove and all other assets were released from tasking.

**Details of Incident:**Indispensable Reefs Solomon Islands

The RCC Australia detected an active EPIRB from the Danish registered sailing yacht and acted in support of MRCC Honiara by forwarding the beacon alerts. A broadcast was issued to shipping and a Regional Assistance Mission to Solomon Islands (RAMSI) helicopter was tasked to respond to the distress beacon signal. A United States Coast Guard communications base in Kodiak Alaska was able to communicate with the vessel by HF radio and established that the vessel had two people on board and was taking on water having run aground on the reef. The RAMSI helicopter was able to locate the vessel and winched both people to safety. Also reported by UKMCC.

**Details of Incident:**350 nm NE off Hawaii, USA

A sailing vessel with one passenger on board initiated a mayday call relaying his position and requesting an immediate medical evacuation. At around the same time, an EPIRB was activated. The EPIRB was registered under a different vessel name and the RCC Victoria started to investigate the beacon activation. Later on the RCC Victoria confirmed that the Maday and EPIRB signals were received from the same vessel. USCG ordered a cargo vessel to divert his course to intercept. A passenger with medical issue was transferred to deep sea vessel enroute to oakland california. The vessel has been abandoned and the EPIRB was turned off. The Cospas-Sarsat System provided supporting data.

**Cospas-Sarsat provided first alert****Beacon Registration Data Available** No**Details of Incident:**Gulf of Carpentaria, Australia

The RCC Australia responded to a distress beacon activation located in central Gulf Of Carpentaria. The distress beacon was registered to the catamaran which was reported to be transiting between Weipa and Gove with two people on board. The Cairns Dornier was tasked to investigate the beacon position and a Cairns rescue helicopter was tasked to act as a rescue platform if required. The nearest surface asset fishing vessel "Felix the Cat" which was approximately 140 miles away accepted a request to close the position. The Dornier located the distressed vessel and established that the yacht had lost both rudders. The vessel was maintaining headway via engines only and was concerned about running out of fuel prior to arriving at Gove. A satellite phone was dropped and the crew were able to rig a temporary rudder and resume passage under sail. The vessel then proceeded to Gove without further assistance.

<b>Cospas-Sarsat provided</b> <u>first alert</u>		<b>Beacon Registration Data Available</b> Yes	

**Details of Incident:**7 nm NW off Jurien Bay, Western Australia

The RCC Australia received a distress alert from an EPIRB registered to an aluminium runabout and was able to establish that the vessel was out on a fishing trip but was not carrying lifejackets. The information was also received that an esky and battery box were found drifting in the water not far from the beacon position. RCC identified an aircraft in the area and diverted the aircraft to investigate the beacon position. RCC also tasked a helicopter from nearby Dongara as well as the rescue helicopter RSCU65 and police helicopter POL61. In addition Jurien Bay Volunteer Marine Rescue were tasked to provide a surface response and broadcasting on VHF marine radio. Shortly after three persons were rescued from the water by a passing fishing vessel. During their debrief the three survivors stated that their boat had capsized the previous night and that they had spent the night in the water clinging to the overturned vessel. The following morning the survivors were able to activate their beacon and alert Search and Rescue Authorities.

**Details of Incident:**

80 nm East off the Whitsunday Islands, Australia

The RCC Australia received an unlocated distress alert from a beacon associated with a fishing dory which was operating from the fishing vessel 'Alda'. RCC were able to establish that FV Alda was anchored near the entrance to Hydrographers Passage. The master of FV Alda advised that the dory had been out all day with one person on board, however he did not know where the dory was and did not have radio communications with the vessel. Due to the short time available before last light, RCC tasked the rescue Dornier RSCU441 from Cairns as well as a customs aircraft with searching for the dory. A tender to the charter vessel 'Nomad' was also tasked with providing a surface response. Before dark the dory was located by Customs aircraft and the tender to Nomad was directed to the dory. The dory operator advised that he had become lost and activated his beacon when he had become low on fuel. The dory was escorted back to FV Alda by the tender to Nomad and all other assets were released from tasking.

Lac Pipmuacan, Bagotville, Quebec, Canada

An unlocated PLB was detected by GOES-East followed by an encoded location. It was noted that the beacon was used with a broad range of outdoors activities including land, sea and air use. Given this note, the JRCC Trenton started prosecuting the case. It was later confirmed as a humanitarian case for a sick 6 year old female. A Griffon helicopter from 439 Squadron completed medical evacuation of the young girl to hospital. JRCC acknowledged the Cospas-Sarsat System was only alerting agency.

<b>Cospas-Sarsat provided</b> <u>only alert</u>		<b>Beacon Registration Data Available</b> Yes	

**Details of Incident:**Sound off Sleat, Isle of Skye, Scotland

The Catamaran Pampero had capsized, seven crew members were on the up turned hull. Alert details were passed from the UKMCC to Falmouth Coastguard who then passed it to Stornaway Coastguard. They were unable to raise communication with the vessel and decided to send a lifeboat to investigate. The UKMCC provided updated EPIRB positions, lifeboat found vessel capsized, crew were recovered safely to the lifeboat. The helicopter Rescue 100 was also alerted from Stornaway but finally not required.

**Details of Incident:**

Headwall Campground, Jasper National Park BC, Canada

A registered PLB was detected goes-west giving an encoded GPS position near the headwall campground at jasper National Park, British Columbia. RCC Victoria was advised of the alert who confirmed using the beacon registration information that the owner was in fact camping in the near vicinity. Jasper Park dispatch launched ground SAR technicians who were unable to reach the location due to rugged terrain. A helicopter was launched later and arrived on scene; it hoisted the injured hiker and transferred him to the local hospital. RCC acknowledged that the Cospas-Sarsat System was the only alerting agency.

**Details of Incident:**12 nm off Thursday Island, Torres Strait, Australia

The RCC Australia detected an active EPIRB signal associated with a fishing boat. The rescue helicopter RSCU700 was tasked from Horn Island, however prior to its arrival the beacon's signal stopped transmitting. RSCU700 was unable to locate the vessel or any signs of distress and no further detections of the beacon were received by satellite. Shortly after Thursday Island Water Police advised that the vessel had safely returned to Thursday Island. The vessel's beacon had been activated following a mechanical breakdown, however the occupants were able to repair the engine and turned off the EPIRB prior to returning to Thursday Island.

**Details of Incident:**Pitt Lake, British Columbia, Canada

An encoded GPS position was detected for a PLB beacon. RCC Victoria passed the registration details to the RCMP. The Vancouver ACC advised Victoria that they had high flyers talking to the distressed aircraft which had a folded nose gear following a forced landing. It was later determined that the aircraft had developed a fuel leak and that the pilot had decided to force land on a sand bar. Two passengers on board were airlifted by cormorant to Squamish, BC. No injuries were reported. RCC acknowledged that the Cospas-Sarsat System provided supporting data.

**Details of Incident:**Moa Island, Torres Strait, Australia

An EPIRB beacon registered to vessel was detected in the Moa Island area Torres Strait. As the beacon registration details were out of date, it took some time to determine that the beacon was onboard a vessel with four persons onboard cray diving at Dollar Reef. There were no aviation assets available at Horn Island, so the Cairns Dornier was tasked to respond. The Thursday Island Water Police were also contacted and requested to provide a surface response. The St Pauls Volunteer Marine Rescue was tasked and other local vessels were advised to be on the lookout for the distress vessel. Prior to the Dornier arriving on scene, it was confirmed that the vessel was safely towed back into port. The beacon was activated after the vessel struck reef and broke their propeller hub.

<b>Details of Incident:</b>			

Wedge Island, Southern Australia

The RCC received a detection of 406MHz beacon on board a runabout with four passengers. The RCC tasked a fixed wing aircraft and a rescue helicopter from Adelaide. The Port Lincoln volunteer marine rescue vessel was also tasked. The fixed wing aircraft located the vessel and remained overhead until the arrival of the helicopter. The helicopter winched down a crewman who found out that the vessel's crew were all well; however the vessel's engine was unable to be started. Further coordination of the incident was handed to the South Australian Police and the vessel was subsequently towed back to Port Lincoln.

**Details of Incident:**Atlantic SW off Yarmouth, Nova Scotia, Canada

The Cospas-Sarsat System detected a Canadian EPIRB followed quickly by a location on the line between RCC Halifax and RCC Boston. The beacon was not registered and all broadcasts went unanswered. Boston RCC launched a falconjet out of Cape Cod and the CCG Earl Grey and 413 SQN Cormorant were tasked. Falconjet found the Canadian fishing vessel at the Cospas-Sarsat coordinates. After dropping a radio to the vessel it was found that the vessels battery had exploded and was on fire and the vessel was dead in the water without any communication or power with three uninjured passengers. The fire was successfully put out by passengers. The vessel was towed to the harbor. RCC confirmed that the Cospas-Sarsat System was the only alerting agency.

**Details of Incident:**100 km North off the Isles of Scilly, Great Britain

One injured crewman was found on board of the pleasure vessel with broken ankle. The SAR helicopter was tasked and sighted red flare near the EPIRB position. When on scene, the crewman fell overboard and was winched into the helicopter. He was taken to the Treliiske hospital with broken ankle and dehydration. EPIRB left active on vessel and continued to transmit.

**Details of Incident:**

Hervey Bay, Queensland, Australia

RCC received an unlocated alert from an EPIRB associated with an aluminium runabout registered in the Hervey Bay area. The beacon contact details revealed that the vessel departed from Urangan boat ramp for one day fishing trip. Police confirmed that the owners vehicle and boat trailer were still at the boat ramp. Further it was revealed that the vessel had reported running out of fuel and having a flat battery but could no longer be contacted. The shore contact was unable to provide a last known position for the vessel. RCC tasked the rescue helicopter RSCU512 from Bundaberg and rescue helicopter RSCU500 from Archerfield with searching the Platypus Bay and greater Hervey Bay area. Hervey Bay Water Police assisted by tasking 2 volunteer marine rescue vessels from Hervey Bay and with issuing a broadcast to shipping on VHF channel 16. The vessel was located later on that night with all four occupants in good health. The vessel was towed to safety by volunteer marine rescue.

<b>Details of Incident:</b>			

Coconut Island, Torres Strait, Australia

The RCC Australia received an unlocated 406 mhz distress beacon alert registered to a tender vessel from fishing vessel Shogun 1. Shogun 1 advised they had a tender operating in vicinity of Coconut Island and would send another tender to investigate. A Customs helicopter of opportunity in the area was tasked to home to the beacon. The helicopter located a broken down tender and passed the information to FV Shogun 1 which sent two other tenders to assist.

<b>Details of Incident:</b>			

70 nm SE off Cape York, Queensland, Australia

The RCC Australia received a satellite detection of an EPIRB registered to the cray-fishing vessel. As the vessel could not be contacted, two aircrafts were tasked to the scene to investigate. A Coastwatch fixed-wing aircraft with limited time onscene reported sighting two fishing vessels and one dory at the beacon location, but no visible sign of distress. The Helicopter R700 arrived onscene shortly after and located two persons on the upturned hull of a fishing dory. The two men were winched aboard R700 and transferred to Thursday Island Hospital for medical assessment.

**Details of Incident:**Bedout Island, Western Australia

An unlocated alert was received from a beacon registered to small craft. The next of kin confirmed that the vessel with three persons onboard was on a spear fishing trip at Bedout Island. The Fremantle Water Police were requested to arrange a surface response and a local Karratha fixed wing aircraft and helicopter were tasked to respond. The helicopter later reported that they had landed on Bedout Island and located the three survivors who had swam ashore after their vessel sank while at anchor 2 km offshore. All persons were recovered by the helicopter and transported to Port Hedland.

**Details of Incident:**50nm South East of Cairns, Australia

A beacon registered to a dory was detected in the outer Great Barrier Reef. The rescue helicopter (Rescue-510) from Townsville was tasked to the incident location along with the Cairns Dornier. After some difficulty communication was eventually established with the fishing vessel and it was confirmed that one of their dories was missing. The Pegasus T got underway and sent another dory to the distress position. Prior to any aircraft getting airborne, it was confirmed that the lone fisherman had been located. He had activated his beacon after sustaining a serious eye injury. Due to the nature of the injury, the Master of Pegasus T requested assistance with the medical evacuation. Queensland Clinical Coordinator was contacted and later accepted coordination for the medical evacuation retasking Rescue 510 to respond.

**Details of Incident:**Shark Bay, Western Australia

An emergency beacon was detected in the Shark Bay area. The beacon was registered to a small craft and emergency points of contact confirmed that the beacon owner and his friend were on a fishing trip in the area. The attempts to contact the vessel were unsuccessful, so a local aircraft and the Perth Dornier were tasked to respond. The Fremantle Water Police were also requested to provide a surface response. The local fixed wing aircraft arrived on scene first and reported no signs of the vessel. The Fremantle Water Police informed that the vessel had safely returned to a local campsite. The beacon had been activated after the vessel broke down, the ignition switch had failed to work resulting in the vessel drifting for some hours.

**Details of Incident:**Hunter Island Park, Ontario, Canada

A registered USA PLB was detected by the Cospas-Sarsat System in Hunter Island Park. The encoded PLB was detected by GOES-East and West. The Ontario provincial police were notified and proceeded to the location via helicopter. One member of a party of four canoeists had broken their ankle and was evacuated to the hospital. The beacon was turned off. The RCC Halifax acknowledged that the Cospas-Sarsat System was the first alerting agency.

<b>Details of Incident:</b>			

80 nm North off Mackay, Whitsundays Area, Australia

The Whitsunday Water Police reported that a VHF mayday call was received from a small craft, which ran aground on Line Reef. The vessel with three persons onboard confirmed that they activated their emergency beacon. The police tasked the Mackay Rescue helicopter and local surface craft to respond. The RCC was requested to provide assistance. Before the Dornier helicopter got airborne, the police confirmed that all three persons were recovered by a rescue vessel. No injuries were reported and all were transported back into Port. The beacon could not be recovered and was left onboard the semi-submerged vessel.

**Details of Incident:**

10 nm South of Louth, New South Wales

The AMSA received a satellite alert reporting the activation of a PLB and contacted the NSW Ambulance service to secure the availability of the closest rescue helicopter. The rescue helicopter was responding to a road accident in the same area. A cross check of available data confirmed that the two agencies were responding to the same incident and that police and a road ambulance had already been dispatched and the nature of the reported injuries did not require a helicopter evacuation. The AMSA were able to provide GPS Coordinates of the accident based on the encoded position of the beacon. The NSW Police at Bourke coordinated the incident.

**Details of Incident:**

Fraser Island, Australia

The RCC received an unlocated detection of a beacon registered to an ex prawn trawler. A query from Hervey Bay Water Police indicated that the vessel broke down at anchor with one person on board. The skipper refused to be taken ashore. The Water Police tasked an officer from Fraser Island to reach the vessel's location by vehicle and the RCC attempted to source a helicopter to attend. No aircraft in the region was available for immediate assistance. Subsequently the Fraser Island police officer arrived on scene and reported that the vessel had broken anchor and washed onto the beach. The skipper had stepped ashore unharmed. The vessel broke up onshore. The beacon and boat debris were recovered by police and rangers.

**Details of Incident:**

115 nm NW off Baie-Comeau, Quebec, Canada

An ELT was detected by GOES-East and West registered to a privately owned wagaero sportsman aircraft. The aircraft had crashed in a remote area of Quebec. Hercules and Griffon helicopters were tasked and found the aircraft nose down in the ground with two people onboard. There were no survivors. The rescue technicians on scene turned the beacon off. RCC acknowledged that Cospas-Sarsat was the only reporting agency.

Sharker Pt, Borrroloola, Northern Territory, Australia

The RCC Australia detected an active 406MHz EPIRB in the vicinity of the Sir Edward Pellew Group in the Gulf of Carpentaria. A military aircraft SEALION16 and Dornier RESCUE441 were tasked to the scene to determine the nature of distress. Prior to their arrival, the Northern Territory Water Police advised that the vessel with two people onboard was located at King Ash Bay and were safe. The police advised that the beacon was activated due to engine difficulties.

**Details of Incident:**

Cowley, Alberta, Canada

An un-located ELT was detected by GOES East. The beacon was unregistered and the 24 bit decoded to a call sign of C-GWGV which belonged to Hawksworth Aviation Ltd. Nav Canada called to advise the crash of the aircraft as the pilot had also called in the crash after hitting the power lines. An ambulance and fire department were dispatched to aid two people on board and control a fire. The beacon was turned off by crews at the scene. RCC acknowledged that Cospas-Sarsat was the first alerting agency with an associated call through air traffic control from the pilot.

Lac Mille, Quebec, Canada

JRCC was informed by Sûreté du Québec of an injured hunter in a remote area near Chibougamau and requested assistance for medevac. The beacon was on board aircraft C-FKFJ and was used by the hunting party to generate a position which helped locate the hunter. Two SAR technicians were dispatched who provided first aid and medical assistance to a person in hypothermic condition with loss of blood. A cormorant in Val d'Or was tasked to evacuate the injured hunter. The cormorant arrived on scene and airlifted the now stabilized patient to Chicoutimi where he was released to medical authorities. The beacon was turned off. The RCC acknowledged that Cospas-Sarsat provided assisting data by providing an accurate location.

**Details of Incident:**

Upper Kandanga, Queensland, Australia

Twin-engine biplane inadvertently entered cloud on a flight from Monto to Caboolture Queensland. The pilot was not instrument rated and the aircraft was not equipped for flight in the Instrument Meteorological Conditions (IMC). The Pilot requested assistance from Air Traffic Control and advised there were six persons on board and the aircraft had approximately 1 hour of fuel remaining. The Helicopter RESCUE 511 from Sunshine Coast Airport was tasked to provide assistance in locating the aircraft and with providing verbal direction toward clear skies. The pilot was requested to activate his Personal Locator Beacon (PLB) as an aide to location. The beacon was detected by satellite but ceased radiating before RESCUE 511 could home the beacon source. The radio communication was lost with VH-UXG around the same time that the beacon ceased being detected. The initial search effort on the first afternoon involved two rescue helicopters. The search was hindered by poor weather conditions with the cloud base reported to be at 200 feet in the search area and down to ground level in places. The AMSA Dornier from Essendon RESCUE 431 then conducted a night electronic search but failed to detect the missing aircraft. Over the following two days, 18 helicopters and two fixed wing aircraft participated in visual search efforts. In addition a helicopter with a telecommunications technician on board conducted an electronic search of the area in attempt to detect a signal from mobile phones known to have been on board VH-UXG. During the afternoon search on the following day, a search helicopter reported sighting the wreckage of VH-UXG approximately two nautical miles to the north of the last reported position. The Helicopter RESCUE 511 deployed personnel to the crash site who later advised that there were no survivors. Coordination was transferred to the Queensland Police who established a crime scene. The police then arranged for a Special Emergency Response Team and Disaster Victim Identification Team to be taken to the crash site.

**Details of Incident:**

King George Ultralight Field, British Columbia, Canada

An unlocated ELT was registered to a Cessna 152 owned by Pacific Professional Flight Centre Ltd. The plane hard landed causing minor damage and activated the ELT. The pilot received no injuries and no aid was required. The beacon was turned off shortly after the hard landing. RCC acknowledged that the Cospas-Sarsat System provided accurate registration data to facilitate a contact with the owner.

**Details of Incident:**Moreton Bay, Queensland, Australia

The RCC received a Cospas Sarsat detection of an EPIRB in Moreton Bay. The registered owners of the beacon advised they had sold the vessel a few years ago. The Brisbane Water Police were contacted and advised that they had tasked the Volunteer Marine Rescue in response to an emergency call for a vessel with five people onboard in Moreton Bay requesting assistance after experiencing mechanical problems. The Helicopter RSCU500 was tasked by the RCC but could not acquire the signal or locate any signs of the vessel in distress at the resolved beacon position. Subsequently, the Brisbane Water Police advised that the vessel was able to make its own way back to the Redcliffe boat ramp. The RCC discussed with the vessel's owners the importance of registering their EPIRB.

**Details of Incident:**

10 nm offshore Irving Island, Mackay, Queensland, Australia

The RCC received aircraft hearing reports of a beacon in the Mackay area. Subsequent satellite detections were received indicating an unregistered EPIRB location. The RCC tasked a helicopter from Mackay and the crew located a broken down vessel with three people on board displaying a V-sheet. The Whitsunday water police accepted further coordination of the incident and tasked Mackay VMR to perform the rescue.

**Details of Incident:**

270 nm East off Sydney, Tasman Sea, Australia

The RCC Australia received a detection of an EPIRB in the Tasman Sea. The registered beacon owner could not be contacted and no details of the vessel were held. With the assistance of two passing commercial jets and the Essendon Dornier RSCU 431 a dismasted and disabled yacht with one person onboard was identified. The container ship was diverted to provide a lee until the arrival of Sydney Water Police vessel. The police vessel conducted the rescue of one person on board and returned to Sydney.

**Details of Incident:**Trois Rivière, Quebec, Canada

The Cospas-Sarsat System detected a 406 ELT distress signal. The JRCC Trenton received information that an aircraft had declared a mayday with an engine fire and was forced to land with two passengers on board. The emergency crew was on scene quickly and transported the two passengers to hospital; one with minor injuries and the other was seriously injured. RCC acknowledged that the Cospas-Sarsat provided supporting data.

**Details of Incident:**

Fort Nelson, British Columbia, Canada

The Cospas-Sarsat System detected a 406 ELT registered to a Bell 206L helicopter. The JRCC was informed by the company that the helicopter was safe on ground after a hard landing. The beacon was not turned off due to the helicopter upsided down in the water and the ELT was not accessible. No injuries were reported. JRCC handed this case to TSB for further investigation. RCC acknowledged that the Cospas-Sarsat System was the only alerting agency.

**Details of Incident:**

50 nm Northeast off Fraser Island, Queensland, Australia

The Gladstone Harbour Control received a VHF radio mayday broadcast from a vessel, which was sinking with two people onboard off Fraser Island. Simultaneously, RCC received an unlocated satellite detection from an EPIRB associated with the same vessel. A nearby merchant vessel responded to the mayday broadcast and proceeded to the distress position. RCC tasked the rescue dornier RSCU471 from Cairns and rescue helicopter RSCU500 from Archerfield. The merchant vessel arrived at the distress position a short time later and located the two people in a life raft. The survivors were taken aboard the merchant vessel and later transferred to a Bundaberg volunteer marine rescue vessel before landed ashore at Bundaberg.

**Details of Incident:**

Port Hawkesbury, Nova Scotia, Canada

An elemental 406 ELT was detected with a US hex code. Both positions were within JRCC Halifax's area, one near Port Hawkesbury, the other off shore toward Sable Island. The registration data was requested from the USMCC and the JRCC Halifax was informed that the aircraft was a Beechcraft. Shortly afterward it was determined that the aircraft had run off the runway and had sustained minor damage. The two passengers on board were uninjured.

**Details of Incident:**

Chilliwack, British Columbia, Canada

The CMCC was alerted on an unregistered, unlocated ELT distress signal. The aircraft was registered to a Cessna 180 aircraft from Edmonton, Alberta. The elemental positions were formed near Nanaimo, however shortly after a conflict position was formed in Chilliwack when the data was downloaded from the Canadian LUT. The JRCC Victoria had reports of an ELT and they were able to confirm the aircraft registration. The pilot indicated that he had a hard landing and the ELT was set off. RCC acknowledged that the Cospas-Sarsat System provided supporting data.

**Details of Incident:**

35nm Northeast off Sandy Cape, Fraser Island, Australia

The Queensland Police were advised that a yacht with four passengers had sustained damage in heavy seas enroute Vanuatu to Bundaberg. The passengers reported that they considered abandoning the vessel to a liferaft. The RCC Australia assumed coordination due to the distance offshore and tasked two helicopters, the Cairns Dornier, a fishing vessel and a merchant ship. The helicopters were unable to effect rescue due to the weather and endurance limitations. The yacht declined assistance of the merchant ship due to fear of damage during the transfer. The RCC Australia handed coordination back to police who monitored the distress vessel. The police advised the vessel to anchor at Lady Musgrave lagoon and effected repairs.

**Details of Incident:**

86 nm West off Alice Springs, Australia

A PLB registered to Apollo Motorhomes was detected near Alice Springs. The beacon emergency contacts advised the beacon was hired with a white Hilux campervan traveling from Adelaide to Alice Springs. The RCC Australia tasked a Royal Flying Doctor Service (RFDS) aircraft from Alice Springs and a Bell-47 helicopter from Glen Helen Resort to investigate. Both aircrafts searched the area around the beacon position without success. The RFDS aircraft was directed to search along the road heading to Alice Springs where a vehicle matching the description was located travelling East with no signs of distress. At no time did any aircraft in the area hear the beacon signal and subsequent satellite passes failed to detect the beacon. Northern Territory Police were asked to intercept the vehicle in Alice Springs and determined the PLB was activated because the hirers got a flat tyre and did not know how to change it. A passerby provided assistance and switched off the beacon.

Yeppoon, Central Queensland, Australia

A Mayday call was received by Yeppoon Coast Guard from a small pleasure boat with five adults and one child onboard operating offshore from Yeppoon. The skipper of the vessel reporting they sustained a split in the hull and were sinking. The Yeppoon Coast Guard rescue vessel responded from their base and the RCC was advised. Subsequently, a distress beacon was detected to the North East of Yeppoon. The Rockhampton based rescue helicopter was tasked and briefed for response. A maritime distress broadcast was issued and a local fishing boat was identified by AIS and tasked to respond. The Yeppoon Coast Guard vessel arrived onscene and safely recovered six people from the sinking craft.

**Details of Incident:**

Norah Head, New South Wales, Australia

An unlocated EPIRB was detected which was registered to a runabout. Further enquiries revealed the vessel left Norah Head for a fishing trip. Details were passed to Sydney Water Police and shortly after the beacon was again detected Northeast of Norah Head. The Sydney Water Police also advised that the local Surf Life savers and volunteer marine rescue group had received reports of a vessel capsized with three people in the water. Westpac 2 and Lifesaver 1 rescue helicopters were tasked and the volunteer marine rescue and surf lifesaving groups provided a surface response. Sydney Water Police accepted coordination of the mission and later advised that all three occupants of the vessel had been rescued from the water by surface craft and the boat sank. The rescue assets were stood down and the beacon was located and turned off.

**Details of Incident:**Kosciuszko National Park, New South Wales, Australia

Several high flying aircrafts reported hearing a distress signal around the Corryong area. A short time later a registered PLB with an encoded position was detected in the Kosciuszko National Park. Helicopter Southcare 1 from Canberra was tasked to the position. An elderly female in a party of nine walkers had injured her lower leg and was subsequently medically evacuated to the Canberra hospital. The beacon was switched off and the remaining walkers continued their hike.

**Details of Incident:**

La Crete, Alberta, Canada

The RCC Trenton was advised of an unlocated 406 ELT distress signal. The registration was the same as an aircraft that was reported overdue near High Level Alberta. The 435 SQN Hercules was tasked to the location. The weather was poor on the scene. The RCMP conducted a ground search and located the wreckage north of the La Crete Airport. The pilot, the only person on board, was fatally injured.

**Details of Incident:**

Coral Sea Islands, Australia

The Australian registered sailing vessel with two people onboard was on a passage from Papua New Guinea to New Caledonia and activated an emergency beacon. The vessel encountered heavy seas which resulted in damaged rigging and sails, therefore the diesel fuel was required to continue their voyage. The RCC Australia tasked the Cairns Dornier and redirected two merchant vessels of opportunity to the location. The merchant vessel reached the stricken sailing vessel and provided 200 litres of diesel fuel to allow travel to Rennell Island (Solomon Islands search and rescue region) for emergency repairs.

**Details of Incident:**

48 nm South off Lakes Entrance, Bass Strait, Australia

An unregistered Australian PLB was detected in Bass Strait. Further information received from the Victoria Police indicated that the beacon was associated with an earlier VHF mayday call from the sailing vessel. The RCC Australia issued a broadcast to shipping and diverted a merchant ship and two helicopters to investigate. The merchant vessel confirmed that the two persons onboard were considering abandoning their yacht due to weather conditions and low fuel aboard. HEMS 2 helicopter subsequently winched them to safety and transported them to Latrobe Hospital. The vessel owners later contracted Bairnsdale Air Charters to relocate and salvage the vessel.

**Details of Incident:**

70 nm NNW off Weipa, Queensland, Australia

A fishing vessel with three people on board issued a mayday call due to intake of water. The Helicopter Rescue 700 from Horn Island was tasked to respond. Subsequently, RCC received a beacon activation from the vessel which confirmed the position. The fishing vessel in vicinity was tasked to respond and the Weipa volunteer marine rescue activated. The helicopter winched the three fisherman to safety and transported them to Thursday Island for medical evaluation.

**Details of Incident:**Esperance, Western Australia

The police received a telephone call from a yacht requesting assistance off the coast of Esperance. The yacht had lost its sails and engine and was concerned about the impact of the weather. Shortly after, the yacht activated its distress beacon and after consultation with police the Perth Dornier was tasked. The dornier arrived on scene and after further communication with the yacht, the incident was downgraded from distress and the EPIRB subsequently switched off. The police maintained coordination and arranged for a fishing vessel to take the stricken yacht under tow to Esperance.

**Details of Incident:**

12 nm SSW off Bathurst Head, Queensland, Australia

The RCC Australia received a 406MHz detection of an unregistered ELT coded to VH-HTD an R22 helicopter. The enquiries revealed that the helicopter was mustering in the Princess Charlotte Bay area. No contact was possible with the aircraft or any of the homesteads nearby. Helicopter RESCUE 510 from Cairns was tasked with beacon homing. While the rescue helicopter was enroute other high flying aircraft reported that the beacon signal had ceased. Further enquiries revealed that three persons associated with the helicopter were reported missing to the police. RESCUE 510 subsequently located the stricken aircraft lying on its side in a mud flat. The crew of RESCUE 510 advised the aircraft suffered only minimal damage and that the accident was considered survivable, however the three persons were not found at the scene. The continued search located all three persons safe and well shortly after. The paramedic assessed them before they were reunited with associates at a nearby stock mustering camp.

**Details of Incident:**

Breakfast Creek Track, Katoomba, Australia

A Personal Locator Beacon was detected in the vicinity of Breakfast Creek Katoomba. The beacon was registered to the Katoomba Police and was hired by three foreign tourists undertaking a bushwalk. The Katoomba Police Rescue squad was mobilized to an area along Breakfast Creek Track while awaiting a refined position. The satellite resolved position was a substantial distance from the track so the police tasked helicopter RESCUE 24 for homing assistance. The helicopter sighted a strobe light near the beacon position and provided direction to the ground search party. The three bushwalkers were located and found to be suffering only minor injuries. The entire party was later extracted by helicopter RESCUE 24 to a waiting road ambulance. The beacon was deactivated.

**Details of Incident:**

Townsville, Queensland, Australia

The RCC Australia received an unlocated alert from an Australian 406 MHz beacon in the Townsville area. Calls to Townsville Water Police revealed that the police were responding to a vessel with three persons onboard. The vessel suffered a loss of power and had drifted up against the rock wall. The rescue of all three persons was undertaken by Townsville Water Police.

**Details of Incident:**

24 nm Noth Abbott Poin, Queensland, Australia

The RCC received a satellite detection of an emergency beacon registered to a sailing trimaran. Shortly afterwards a Customs Dash 8 aircraft VH-ZZJ on a routine surveillance flight in the area reported hearing a mayday call on marine VHF. VH-ZZJ was diverted to the beacon position and a broadcast to shipping was made. The Townsville Water Police were contacted for provision of surface assets and the Cairns Dornier Rescue 441 was tasked in support of the aircraft. The Customs aircraft arrived on scene and reported two people on the upturned hull of the trimaran. They were uninjured and able to communicate by radio with the aircraft. VH-ZZJ was relieved on station by Rescue 441 which remained overhead until Bowen Volunteer Marine Rescue had safely retrieved the sailors from the stricken craft. The sailors were taken to Bowen.

**Details of Incident:**

Wallaby Reef, Australia

The RCC received an initial detection of an emergency beacon registered to a dory belonging to the fishing vessel operating from Bowen. A contact with the operators revealed that the dory concerned was in fact operating from a different mother vessel and had one person aboard. The fishing vessel was directed to the position indicated in the satellite detection but could not locate the dory and the Cairns Dornier Rescue 481 was tasked. The vessel operator Bowen Fisheries Co-op advised that the dory was due to transit to Bowen and was not expected to return to the mother vessel. The Dornier arrived on scene and conducted an initial search with no success; later on it was advised that the missing man had been located close to Bowen safe but out of fuel and that Bowen Fisheries Co-op were prepared to recover him. The Dornier was released from task. Doryman and recovery vessel later confirmed safe arrival ashore.

**Details of Incident:**

8 nm NNE off Briagalong, Victoria, Australia

A satellite detection was gained on a registered PLB in rugged country North off Briagalong. Further enquiries indicated that the beacon was being used by trail bike riders. Helicopter HEMS2 from Latrobe Valley was tasked with beacon homing. The helicopter located the beacon source and determined the activation was the result of a serious trail bike accident. A medical support was administered on scene before the patient was conveyed to hospital in Melbourne. The beacon was deactivated.

**Details of Incident:**

Ivo Trinity Beach, Cairns, Australia

An unlocated unregistered personal locator beacon was detected by satellite and shortly afterwards beacon hearings were reported by aircraft in the Cairns area. An initial satellite position was received near Yorkeys Knob North off Cairns. The Cairns Water Police were requested to source surface assets and helicopter RESCUE 510 from Cairns was tasked. The Water Police advised that they had received reports of a small sailing vessel capsized in the vicinity of Trinity Beach and that the local Volunteer Coastguard and Surf Lifesavers had been tasked. RESCUE 510 arrived on scene and winched one person from the water. After a brief search two more people were located and winched to safety. RESCUE 510 returned the uninjured people to Cairns and the beacon was confirmed deactivated.
